[Hi Eleanor,](#)

In looking at the application, you are correct in that I don't see the point of communication being specified. This is strange because I am quite sure that I checked to see that Permitted List was shown in the form 312 as I was filling it out.

Our intended point of communication is the permitted list.

To clarify, the function of the earth station is to serve as an additional gateway hub for our AMSS terminals which are authorized under call sign E050318. The function of the antenna is essentially the same as that of our existing hub antenna which is call sign E030131.

I have also attached the radiation hazard assessment. My apologies for the omission.

I will call you shortly to confirm that this information is everything that you are looking for.

Thanks and regards,

Daryl
