

SUPPLEMENT AND REQUEST FOR COORDINATED ACTION

Pursuant to prior consultation with the Bureau staff, the following information is being filed as a supplement to the record of the Application for VSAT Network Facilities filed by Shared Data Networks LLC (“SDN”) (SES-LIC-20090707-00840) (“Full Application”). The Full Application was accepted for filing by the Commission on July 15, 2009 and announced by Public Notice released on that date (Public Report No. SES-01155). SDN also has pending before the Commission, a Transfer of Control Application that was accepted for filing on July 22, 2009 (Public Notice Report No. SES-01157). The Transfer of Control Application was originally submitted to the Commission on December 4, 2008, requesting authority to transfer control of three VSAT networks, E050007, E920415 and E881406. During its pendency and prior to acceptance of the Transfer of Control Application, the authorization for one of the three networks (E881406) expired. Accordingly, on June 4, 2009, SDN applied for an STA to cover the expired facilities on an interim basis (“STA Application”). The Full Application referenced above is aimed at covering the expired facilities for a full license term. The Commission granted the STA Application for a 60 day period effective August 4, 2009 and released the Public Notice of this action on August 5, 2009 (Public Notice Report No. SES-01162). The Call Sign employed in granting the STA Application and for processing the Full Application is E881406, the same call sign previously used to cover these facilities.

Because the dates of the release of the two acceptance notices for the Transfer of Control Application and the Full Application are so close in time with respect to each other, it is not clear which will be reached first for final action. With that in mind, and in the interest of having a full and complete record before the Commission prior to its acting on either the Transfer of Control Application or the Full Application, SDN hereby supplements the record of the Full Application to report the filing and the grant of the STA Application for the facilities formerly licensed as E881406 and to further cross-reference the pending status of SDN’s Transfer of Control Application. The facilities described in the STA Application and the Full Application remain unchanged from the ones covered by the expired E881406 license. Accordingly, it is respectfully requested that the Commission coordinate its action on the Full Application for

E881406 with its processing of the Transfer of Control Application and further asks that the Commission take note of the fact that the STA Application was granted August 4, 2009. SDN has contemporaneously requested by supplement to the Transfer of Control Application, that the authority petitioned for therein include authority to transfer control of SDN's newly granted Special Temporary Authority and the VSAT network facilities as described in the Full Application. Such synchronized processing will be administratively efficient, allow for an uninterrupted continuation of services and will be in the public interest.

Respectfully Submitted,

SHARED DATA NETWORKS LLC
