Hi Towanda,

Please correct the information in the application as follows:

The correct point of communication should be ALSAT.

The EIRP density should be 35.927 dBW/4 kHz

The Max EIRP should be 75.469 dBW

The antenna gain should be 52.909 dBi

With these corrections, the numbers should then work out as antenna input power is 180.3 W and input power density is -16.982 dBW/4 kHz.

Thanks and regards,

Daryl
