

TELEBEEPER OF NEW MEXICO, INC.
FCC FORM 312
ATTACHMENT 1

Item 28

TeleBEEPER of New Mexico, Inc. (“TeleBEEPER” or “Applicant”) respectfully requests a waiver of the requirement to submit a radiation hazard study, to the extent necessary.

The subject application seeks to re-authorize the same equipment, at the same power levels, that was previously authorized under Call Sign E940533. The only change from that prior authorization involves the relocation to TeleBEEPER’s current headquarters, approximately 0.3 miles from the previously-authorized location. Consequently, there is no change in the potential for human exposure to RF radiation from that previously authorized by the Commission. Additionally, the requested earth station will be operated at relatively low power. Moreover, the subject station will be located on TeleBEEPER’s rooftop accessible only to TeleBEEPER’s technical personnel or contractors who are well aware of the potential for RF exposure.

For all the foregoing reasons, TeleBEEPER respectfully submits that the inclusion of a new radiation hazard study with this application is not necessary to ensure that human exposure to RF is limited as contemplated by the Commission’s rules and policies. TeleBEEPER therefore respectfully requests that the Commission waive the requirement to include such a study.
