

Exhibit D

Description of Proposed Operations

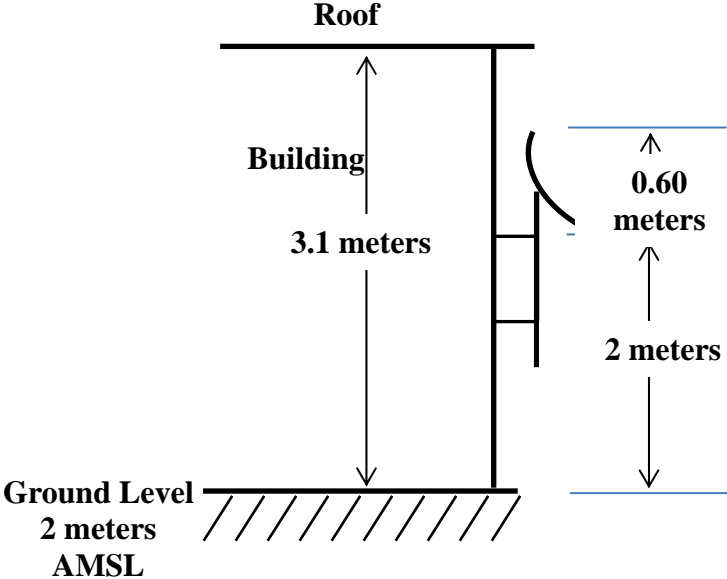

By this application, LightSquared Subsidiary LLC (“LightSquared”) seeks authority to construct and operate a remote earth station in Miami, Florida (the “Miami Earth Station”), which would operate as part of LightSquared’s existing satellite carrier monitoring system (“SCMS”).

LightSquared’s SCMS currently consists of (i) a hub earth station located in Ottawa, Ontario and (ii) seven technically similar SCMS remote earth stations located in the United States and Canada. These earth stations operate pursuant to authority granted by the Commission and Industry Canada. In particular, the Commission has authorized the SCMS remote earth stations currently operating in the United States. *See* IBFS File No. SES-MOD-20110906-01039.

The Miami Earth Station would be technically similar to the remote earth stations that the Commission already has authorized. Moreover, the Miami Earth Station would be used for the same purposes as the already-authorized SCMS remote earth stations. More specifically, and consistent with LightSquared’s existing SCMS authority, the Miami Earth Station would be used to monitor: (i) the signal levels of LightSquared’s various in-orbit spacecraft, including SkyTerra 1, MSAT-1, and MSAT-2; and (ii) the performance of the link from the Miami Earth Station to the hub station. The Miami Earth Station would not provide any end-user functionality, and would not require any coordination with terrestrial operators.

In short, the Miami Earth Station would be used to augment the capabilities of the SCMS and advance its underlying objectives, which the Commission already has found to be in the public interest. Accordingly, LightSquared respectfully requests that the Commission grant the instant application on an expedited basis.
