RF RADIATION HAZARD ANALYSIS Exhibit #B

Antenna Diameter, (D) = 1.25 meters / 4.10125 Feet

Antenna Surface Area (Sa) = 1.2272 sq meters

Subreflector Diameter (Ds) = 0.0000 centimeters

Ku Wavelength at 14.250 GHz (LAMBDA) = 0.21038067 meters

Power output of VPC Flange= 20.969 dB

Path Loss to OMT (IL) = 0.6 dB

Power at OMT, (P) = 108.87 Watts

Antenna Gain at 14.250GHz (G) = 43.40 dBi (2 port antenna gain)

Antenna Gain given in Power Ration, (Ges) = 2.19E+04 Antenna Aperture Efficiency (N) = 0.650

Region		Radition Level		Hazard Assessment	
Far Field, (Rf) =	4.456 meters /	14.62 Feet	954.485	mW/cm sq	Potential Hazard
Near Field, (Wf) =	1.857 meters /	6.092 Feet	23.066	mW/cm sq	Potential Hazard
Transition Region (Rt)			equal to	or less than	
Ru <rt<rf< td=""><td></td><td></td><td>23.066</td><td>mW/cm sq</td><td>Potential Hazard</td></rt<rf<>			23.066	mW/cm sq	Potential Hazard
Between Main Reflector			N/A (no	subreflector)	
and Subreflector (Ws)					
Main Reflector Region (Wm)			17.743	mW/cm sq	Potential Hazard
Power Density Between Reflector			8.872	mW/cm sq	Potential Hazard
and Ground					
Far Field Off Axis (WF)			9.545	mW/cm sq	Potential Hazard
Near Field Off Axis (WN)			0.231	mW/cm sq	Meets ANSI Requirements

Conclusion: Based on the above analysis, harmful areas of Radiation do exist in the areas around the antenna and in the path of the antenna toward the satellite that it is pointed at. The Area occupied by the general public will not exceed the ANSI limit of 1mW cm sq. because the antenna is mounted on top of the truck, which is at least 6 feet above the ground, and safety increases with look angles used by the Satellites in the United States on Dom. Sat. arch. The areas on the ground and behind the antenna are 100 times less power (20dB) when at a min. of the dia. of the reflector. This is reflected in the Off Axis figures as seen above (WF) & (WN). The SNG will be marked with the standard radiation hazard warnings, and on the antenna itself. The warning signs will warn personnel to avoid the area around and in front of the reflector when the transmitter is operating. To ensure compliance with safety limits, the earth station transmitter will be turned off and marked to remain off whenever maintenance and repair personnel are required to work in the areas of potential hazard as defined in the above study. Additionally, the earth station personnel will be trained to ensure that the antenna path is clear at all times while the transmitter is in operation. The only access to the roof of the truck is a ladder that is not accessible by the general public.

Note: See Exhibit #Ba for how the above calculations were made.
