Hi Christine,

We note that the proposed maximum eirp per carrier of 75.07 dBW needs to lower to 75.04 dBW , and eirp density of 35.53 dBW/4kHz to lower to 35.49 dBW/4kHz to correspond with the proposed maximum input power at the antenna flange of 350W and antenna transmit gain of 49.6 dBi. We will correct in the record to reflect the lower values.

Sincerely,  
Trang Nguyen
