Hi Paloma,

Here's what the data group reported back:

"There are no permanent microwave licenses in those frequency ranges. There are only itinerant, temporary licenses that are secondary to satellite communications, and these licenses have no specific location data. A few of the latter are authorized statewide for Alaska across a wide variety of temporary frequency ranges, but they do not have operational locations or parameters."

Please let us know if you require further information and sorry for the delay.

Regards,

Gary Edwards

No need to apologize 😊 I missed a couple calls last week that could have been them reaching out.

Appreciate your help on this!

Hi Paloma,

I was out last week and before I left they told me they would reach out to you, obviously that didn't happen.

My apologies again and will escalate your request.

Regards,

Gary Edwards

Hi Gary –

Just bringing this question back to the top of your inbox 😊

Thanks!

Subject: RE: Ka-band Frequency Coordination Map Request

Hi Gary –

Were you able to get an idea on if Comsearch could create a map as requested and what it would cost?

Thanks!

Subject: Ka-band Frequency Coordination Map Request

Hi Gary –

Thanks for your time today

As discussed, please look into the cost of a map detailing the locations in the state of Alaska where there are existing MW radios in the following ranges:

- 18.3-18.58 GHz band
- 29.25-29.5 GHz Band

Let me know if you need any additional information, and I look forward to hearing from you!
