

Exhibit A

Answer to Question 43 of Form 312

PanAmSat Licensee Corp. ("PanAmSat") requests modification of its earth station license, call sign KA450, to add a new point of communication and corresponding frequencies, emission designator and related services.

The present modification seeks to add:

- 1) a point of communication, GE-23@ 188°W.L., as a new line item 8) under section D) of the current license;¹
- 2) the corresponding frequency bands 10950-11200 MHz, 11450-11700 MHz and 14000-14500 MHz and related emission designator for the transmission of digital video, audio and data services to/from GE-23, as new line items 74) to 79) under section B) of the current license;
- 3) the related frequency coordination information as new line items 9) to 11) under section C) of the current license.

The relevant modification sought is shown in Exhibit B of this application.

The coordination information relevant to the new emission designator and related frequencies and point of communication is provided as Exhibit C of this application.

All other parameters of the current license remain unchanged. Specifically, the present application does not entail any material change to the existing "transmit and receive" parameters of the earth station licensed under call sign KA450. Only a new point of communication and corresponding frequency bands and services are being added. As such, PanAmSat does not include a Schedule B covering parameters already in the license. To the extent necessary, the Schedule B information previously provided is incorporated by reference, as amended by the information for the additional point of communication and related frequencies and services shown in Exhibit B of the instant license application.
