

Exhibit A

Response to Question 43, FCC Form 312

Intelsat License LLC (“Intelsat”) requests modification of its earth station license, call sign KA265, to add new points of communication and new emission designators for communications in the 3700-4200 MHz and 5925-6425 MHz bands.

Earth station KA265 currently authorizes communication in the frequencies 5850.0-6425.0 MHz and 3625.0-4200.0 MHz with New Skies Satellite, N.V. 513 @ 183.0 E.L., as well as U.S.-licensed Intelsat satellites at 174.0 E.L., 180.0 E.L. and 176.0 E.L.

This modification seeks to add new points of communications to allow operations with all authorized U.S. Domestic (ALSAT) satellites, limited to the 5925.0-6425.0 MHz and 3700.0-4200.0 MHz conventional C-band frequencies. It also seeks to add new emission designators in the 5925.0-6425.0 MHz and 3700.0-4200.0 MHz frequency bands. All points of communications and emission designators currently included in the license remain unchanged.

The relevant modification sought is shown in Exhibit B of this application.

The coordination information in the current license adequately covers operations with the new emissions and points of communications sought in this modification application. This KA265 modification application is similar to Intelsat’s recently granted modification of its earth station, call sign KA268,¹ which added points of communications and emission designators. In the application modifying KA268, Comsearch sent a letter confirming that no new coordination report was required because the transmitted e.i.r.p. densities of the new emissions requested were lower than those already authorized in the corresponding existing license. Similarly in this case, the transmitted e.i.r.p. densities of the new emissions requested are lower than those already authorized in the current license. All other parameters of the KA268 license remained unchanged.

Furthermore, this application does not entail any material change to the existing “transmit and receive” parameters of earth station KA265. Intelsat is only requesting new points of communication and emission designators be added. As such, Intelsat does not include a complete Schedule B. To the extent necessary, the Schedule B information and any other relevant exhibits previously provided are incorporated by reference, as amended by the new points of communication information and new emission designators shown in Exhibit B of this application.
