Subject: Correction to "Narrative & Part 25 Compliance" exhibit of KA313 Modification Application SES-MFS-20150417-00221
Attachments: Correction to Response Showing Compliance With 25.222 (c).pdf

Mr. Blais,

I am following up on my telephone call to you of earlier today in which we discussed an error that was discovered in a response set forth on the last page of the "Narrative & Part 25 Compliance" exhibit submitted with the SES-MFS-20150417-00221 Modification Application . The original response asserts applicant's compliance with Section 25.222 (c) of the Commission's Rules for Earth Stations on Vessels. As noted during this phone call the last sentence of the submitted response states –

Until the coordination process is completed ASGI will continue to comply with 25.222 (c) by not operating Ku-band ESVs at all in the 14.47 – 14.5 GHz frequency band within the specified distances of the protected facilities.

The sentence should state –

Until the coordination process is completed ASGI will continue to comply with 25.222 (c) by not operating Ku-band ESVs at all in the 14.0 – 14.2 GHz frequency band within the specified distances of the protected facilities.

As per your instruction I prepared the attached correction request and am adding it and this email to the file via the IBFS Pleadings and Comments tool. Could you please accept this correction request and bring it to the attention of the engineer handling the SES-MFS-20150417-00221 Modification Application.

Thank you.

Best regards,

James G. Lovelace
