12 January 2018

This letter accompanies ISAT U.S.' application to modify its aeronautical earth station license, Call Sign E140114, to add the Inmarsat 5F1 satellite, located at 63 EL, as a point of communication to the already authorized terminal types included in that license. Inmarsat certifies that the proposed use of the aeronautical earth station terminals at the technical levels specified in the Commission's authorization are consistent with existing coordination agreements with adjacent satellite operators within +/-6 degrees of orbital separation from the Inmarsat 5F1 satellite.

Sincerely,

Jonas Eneberg  
VP, International Spectrum Management
