

CLARIFICATION OF ANTENNA GAIN

SCI-Sacramento Licensee, LLC, the license of Domestic Fixed Satellite Service Temporary-fixed Transmit-only Earth Station E000123, includes the instant attachment to its Form 312 application for modification for correction of license to clarify the antenna gain specification. Although the correct antenna gain in dBi has been entered in the IFBS electronic filing system, printed versions of the Form 312 truncate the figure by deleting the numbers to the right of the decimal point. The complete antenna gain specification is as follows:

Item E41/42: Antenna Gain Transmit 49.4 dBi at 14.25 GHz.
