Towanda,

I have a question on the following license.  
Oral Roberts University - Tulsa, Ok  
Call Sign: E2454 - FCC File Number: SES-MOD-20031126-01727 Prodelin 1383 3.8  
meter antenna - Antenna Id: 1C

The license lists the incorrect information for the Max EIRP. for the 36M0G7W  
emission designator. The attached .doc shows the line item off the license.

It looks like the max ERIP Density number 55.8 is the number for the EIRP  
Density per MHz from the coordination information. The ERIP density should be  
71.3 dBW. The frequency coordination exhibit attached with this application  
reflected the correct information.

Since the Max. EIRP Density of 31.8 dBW/4KHz is correct and we will not be  
increasing the power that was coordinated, whta do we need to do to get the  
correct ERIP number on the license.

Thanks in advance.

Tim Crutcher
