

Affidavit  
January 5, 2005

Furthermore, in order to prevent unacceptable interference into adjacent satellites, SES and NYPD acknowledge that this antenna will be operated in compliance with the technical, operational, and performance requirements of Part 25 of the FCC rules and any requirements set forth in the license granted by the FCC for the above sub-meter AvL antenna. SES and NYPD acknowledge that the use of the AvL non-conforming antenna will not cause unacceptable interference into adjacent satellites in accordance with the FCC's 2-degree spacing policy and will accept interference from adjacent satellites at the same levels as that of an earth station employing an antenna conforming to the reference patterns defined in § 25.209 of the FCC rules. If the use of this antenna should cause interference into other systems, NYPD has agreed that it will terminate transmission immediately upon notice from the affected parties.

Furthermore, should other satellites be positioned at the aforementioned orbital location, the transponder assignments coordinated pursuant to this letter will remain the same. SES Americom will promptly provide Intelsat with relevant information for any new transponders if and when leased by NYPD from SES, for purposes of inter-system coordination, which will be operated on above agreed conditions only.

Sincerely,
