Re: Section 1.65 Update to IBFS File No. SES-MOD-20040124-00090
Update to Application to Modify Satellite Earth Station E900081

Dear Ms. Dortch:

GeoLogic Solutions, Inc. ("GeoLogic"), licensee of satellite earth station E900081 ("Earth Station"), by its attorneys, hereby files this letter pursuant to Section 1.65 of the rules of the Federal Communications Commission ("FCC" or "Commission") to update the above-referenced application ("Application") seeking FCC consent to modify the license term of the Earth Station authorization to permit GeoLogic to operate its currently licensed 50,100 half-duplex mobile earth terminals ("METs") in the lower L-band for an additional four years, until July 2, 2010. GeoLogic explained in the Application that the METs operate on a multi-mode satellite and terrestrial network, whereby communications are first attempted over terrestrial networks. Where terrestrial coverage is unavailable, messages are routed over a lower L-band satellite network. GeoLogic has entered into negotiations to make a significant investment in its business that it would not otherwise make without the existence of the extended METs license. Because the proposed investment is time critical due to circumstances beyond GeoLogic's control, GeoLogic finds itself in a near term need to make decision on the investment very quickly. In light of the foregoing, GeoLogic requests that the Commission act upon the Application without delay.

Please do not hesitate to contact the undersigned with any questions regarding this matter.

Sincerely,

Tom W. Davidson, Esq.
