Question, the gentlemen called me yesterday said to change all of the angles to the angles of the 2nd antenna, which would also include the Elev (east) and Azim (east) and the Maximum EIRP towards the Horizon. Please double check this and get back with me.

Towanda,

Here is the requested information regarding antenna 1:

For Antenna I please change the western limit of the Satellite Arc to 244 West Longitude.

I believe that it was incorrectly entered on the original license as 224 West Longitude.

The calculated values on the original license are actually for 244 West Longitude.

This changes the calculations to Elev (West) = 5.4 and Azimuth (West) = 251.4

Also please delete both instances of the "unknown" 88K0FG7W emissions designations.

I think this should cover it. Please let me know if it doesn't. Thank you very much for your help in this matter!

Thank You
