**Re: Satamatics, Inc., File No. SES-MOD-20070924-01315**

Dear Ms. Dortch:

On September 24, 2007, Satamatics, Inc. ("Satamatics") filed the above-referenced modification application ("the Modification") to change its regulatory status from common carrier to non-common carrier. By this letter, Satamatics seeks to clarify two points set forth in the Modification.

First, the Modification does not seek a determination from the International Bureau ("the Bureau") that Satamatics should have always been entitled to non-common carrier treatment. Instead, by the Modification, Satamatics simply requests that the Bureau modify Satamatics' regulatory status so that the company may be regulated on a non-common carrier basis prospectively.

Second, Satamatics seeks to clarify footnote 3 of the Question 43 Attachment which references the D2 mode of D+, also referred to by Inmarsat as ISatM2M. Specifically, Satamatics seeks to clarify that D2 is not a new service, but simply provides minor enhancements to the current D+ service, increasing the message size and reducing message latency. This enhanced service will be provided over the existing D+ transmission network. Many existing D+ mobile earth terminals

("METs") are capable of providing D2 through a simple firmware upgrade, while some newer D+ METs are already capable of offering the latest version of D+. Satamatics will file all necessary applications with the Commission so that it may provide the latest version of D+ in the United States.

Respectfully submitted,

A handwritten signature in black ink that reads "Marc A. Paul". The signature is written in a cursive, flowing style.
