

Attachment A
Response to Question 24: Frequency Bands

1530-1559 MHz
1626.50-1660.5 MHz

GeoLogic Solutions, Inc. (“GeoLogic”) is the licensee of satellite earth station E900081, pursuant to which GeoLogic is authorized to operate (a) 50,100 half-duplex mobile earth terminals (“METs”) in the lower L-band, *i.e.* 1530-1544/1626.5-1645.5 MHz (“Lower L-Band Authorization”) and (b) 30,000 half-duplex METs in the upper L-band, *i.e.* 1545-1559/1646.5-1660.5 MHz (“Upper L-Band Authorization”). Accordingly, this Attachment A specifies frequencies of operation for E900081 across the entire L-band. Importantly, the instant application (“Application”) seeks consent of the Federal Communications Commission to modify the license term of the Lower L-Band Authorization only to permit GeoLogic to operate its authorized METs through April 30, 2011. The Upper L-Band Authorization expires on September 30, 2011. This Application does not seek to modify the license term or any other aspect of the Upper L-Band Authorization.
