

Exhibit A

Answer to Question 43 of Form 312

PanAmSat Licensee Corp. ("PanAmSat") requests modification of its license, call sign E4132,¹ pursuant to Section 25.118(a) of the FCC's rules, to add authority to use circular polarization for all the emissions currently contained in the license.

The current license for call sign E4132 authorizes communication in the frequencies 5925-6425 MHz, 3700-4200 MHz and 6666.5 MHz with all authorized U.S. domestic (ALSAT) satellites in the above conventional bands, as well as with ICO-G1@92.85 W.L.

The present modification seeks to change the polarization information in the current license to indicate both circular and linear polarization: H,V,L,R.

All other parameters of the current license remain unchanged.

The present application does not entail any material change to the existing "transmit and receive" parameters of the earth stations licensed under call sign E4132. Only new polarization information is being added. As such, PanAmSat does not include a Schedule B covering parameters already in the license. To the extent necessary, the Schedule B information previously provided is incorporated by reference.
