

FREQUENCY COORDINATION ANALYSIS AND FREQUENCY COORDINATION CERTIFICATION FOR C-BAND  
OPERATIONS IN THE USA

The applicant is aware of the FCC rules and regulations part 25.130 (b), which states that a frequency coordination analysis (RFI) will be submitted with this application. However, this request for application is for a Temporary Fixed Earth Station that will operate at various geographical locations throughout the USA and its territories therefore, no specific site can be identified at this time.

The applicant does not request to be exempt from the coordination process. The attached RFI sample demonstrates that the applicant will follow the coordination process required for temporary earth station operations.

The applicant certifies that they are familiar with parts 101 and 25 of the FCC rules and regulations regarding frequency coordination processes. The applicant is also aware of and agrees to perform an analysis and notification to potentially affected carriers prior to transmitting at each location.
