Subject: E881163

Towanda,

In connection with the E881163 modification application, for the 36M0F3F emission designator, the power levels may be changed as follows:

450 watts
80.43 EIRP
54.44 EIRP Density

As we discussed, the 4.1 meter Comtech Offsat Antenna also on the E881163 license, the manufacturer, Comtech, refers to this as a 5.5 meter antenna.

The radiation hazard study equivalent is 4.1 meter.

This antenna is routinely licensed.

If you have any questions or need anything else, please let me know.

Thanks,

Frank
