

Description of Request

With this modification application, Skybox Imaging, Inc. (“Skybox”) requests authority to relocate its earth station licensed under Call Sign E130037 to a new location approximately four miles from its existing authorized location in Half Moon Bay, California. *See* SES-LIC-20130221-00197 (granted March 28, 2013). The relocation is necessary because Skybox has determined that it will not be able to secure the necessary rights from the site owner to operate from the authorized location as anticipated. Skybox has secured those rights for the proposed new location.

Except for the new location, all other aspects of the earth station licensed under Call Sign E130037 will remain as currently authorized. Skybox incorporates herein by reference the radiation hazard study submitted with the initial request for authorization. Skybox reiterates that its operations at the new location will be conducted on an occasional, temporary basis only, and will be coordinated with relevant authorized Broadcast Auxiliary Service operations in the 2081-2083 MHz band. The required frequency coordination report for the proposed new location is included with this application.
