Skynet did not include Satmex 8 as a point of communication because the satellite is on the Permitted List. Skynet's antenna is currently licensed for Permitted List space stations and uses only standard C-band frequencies.

Good Afternoon Gentlemen,

My name is Jose Trevino and I'm the engineer working on the Skynet Satellite Cooperation modification licensing application. I have a question: Is Skynet also adding Satmex 8 as a Point-of-Communication? If yes, it's not under the FCC form 312 as POC. Please verify this POC.

Thanks,

Jose Trevino
