RF RADIATION HAZARD ANALYSIS
Exhibit #B

Antenna Diameter, (D) =	1.45 meters /	4.75745 Feet	
Antenna Surface Area (Sa) =	1.6513 sq meters		
Subreflector Diameter (Ds) =	0.0000 centimeters		
Ku Wavelength at 14.250 GHz (LAMBDA) =	0.21038067 meters		
Power output of VPC Flange=	20.000 dB		
Path Loss to OMT (IL) =	0.6 dB		
Power at OMT, (P) =	87.10 Watts		
Antenna Gain at 14.250GHz (G) =	44.80 dBi (2 port antenna gain)		
Antenna Gain given in Power Ration, (Ges) =	3.02E+04		
Antenna Aperture Efficiency (N) =	0.650		

Region			Radition Level		Hazard Assessment
Far Field, (Rf) =	5.996 meters /	19.67 Feet	582.140	mW/cm sq	Potential Hazard
Near Field, (Wf) =	2.498 meters /	8.197 Feet	13.713	mW/cm sq	Potential Hazard
Transition Region (Rt) Ru<Rt<Rf			equal to or less than 13.713	mW/cm sq	Potential Hazard
Between Main Reflector and Subreflector (Ws)			N/A (no subreflector)		
Main Reflector Region (Wm)			10.549	mW/cm sq	Potential Hazard
Power Density Between Reflector and Ground			5.274	mW/cm sq	Potential Hazard
Far Field Off Axis (WF)			5.821	mW/cm sq	Potential Hazard
Near Field Off Axis (WN)			0.137	mW/cm sq	Meets ANSI Requirements

Conclusion: Based on the above analysis, harmful areas of Radiation do exist in the areas around the antenna and in the path of the antenna toward the satellite that it is pointed at. The Area occupied by the general public will not exceed the ANSI limit of 1mW cm sq. because the antenna is mounted on top of the truck, which is at least 8 feet above the ground, and safety increases with look angles used by the Satellites in the United States on Dom. Sat. arch. The areas on the ground and behind the antenna are 100 times less power (20dB) when at a min. of the dia. of the reflector. This is reflected in the Off Axis figures as seen above (WF) & (WN). The SNG will be marked with the standard radiation hazard warnings, and on the antenna itself. The warning signs will warn personnel to avoid the area around and in front of the reflector when the transmitter is operating. To ensure compliance with safety limits, the earth station transmitter will be turned off and marked to remain off whenever maintenance and repair personnel are required to work in the areas of potential hazard as defined in the above study. Additionally, the earth station personnel will be trained to ensure that the antenna path is clear at all times while the transmitter is in operation. The only access to the roof of the truck is a ladder that is not accessible by the general public.

Note: See Exhibit #Ba for how the above calculations were made.

Antenna Diameter, (D) =	D: =	1.45 meters	D*3.281 =	4.757	Feet
Antenna Surface Area, (Sa) =	Sa: = $\pi *$ $\dfrac{D*D}{4}$		Sa =	1.651	sq meters
Subreflector Diameter, (Ds) =	Ds: =	0 cm	Ds*.3937	0.000	Inches
Area of Subreflector, (As) =	As: = $\pi *$ $\dfrac{Ds*Ds}{4}$		As=	0.000	sq meters
Center Frequency, (Cf) =	Cf: =	14.250 GHz			
Wavelength at (Cf), (Lambda) =	Lambda =	0.2103806709 meters			
Tansmit Power at HPA or VPC Flange, (P1) =	P1= P2:=log(p1)*10	100.00 watts	P2=	20.000	dB
Path Loss from HPA or VPC to OMT, (IL) =	Loss: = P3:= P2-Loss P:= $10\dfrac{P3}{10}$	0.6	P3= P=	19.400 87.096	OMT Pwr in dB OMT Pwr in watts
Antenna Gain at (Cf), (Gain) =	Gain: =	44.80 dBi			
Antenna Gain Converted to Power Ratio (Ges)=	Ges: = $10\dfrac{Gain}{10}$		Ges =	3.02E+04	Ratio
Antenna Aperture Efficiency, (n) =	n: =	0.6500			

Far Field (Rf) =	Rf=	$\dfrac{.60*(D*D)}{Lambda}$	Rf = Rf*3.281=	5.996 19.674	meters feet
Far Field Power Density (Wf) =	Wf=	$\dfrac{Ges*P}{4*\ \pi\ *\ (Rf*Rf)}$ *.1	Wf =	582.140	mw sq cm
Near Field (Rn) =	Rn=	$\dfrac{(D*D)}{4*Lambda}$	Rn= Rf*3.281=	2.498 8.197	meters feet
Near Field Power Density (Wn) =	Wn=	$\dfrac{16*n*P}{\pi*(D*D)}$ *.1	Wn =	13.713	mw sq cm
Transition Region (Rt) =	Rt =	Wn*1	Rt=	13.713	mw sq cm (Equal to or less than)
Pwr Density at Sub Reflector (Ws) =	Ws=	$\dfrac{2*P}{As}$ *1000	Ws =	N/A	
Main Reflector Region Pwr Density (Wm) =	Wm=	$\dfrac{2*P}{Sa}$ *.1	Wm =	10.549	mw sq cm

Required Data			
Antenna Model		Sat-Lite Model 1411	
Amplifier Model		IRT TPB-KXB0500-HMS0	
Antenna Diameter (D)	1.45	meters	
Subreflector Diameter (Ds)	0	cm	
Center Frequency (Cf)	14.250	GHz (14.250 GHz for Ku-Band)	
Transmit Power at HPA or VPC Flange (P1)	100.00	watts	
Path Loss from HPA or VPC to OMT (IL)	0.6	dB (0.6 for Hub Mount, 2.0 for Rack Mount)	
Anntena Gain at (Cf) (Gain)	44.80	dBi	
Anntena Aperture Efficiency (n)	0.65		
Bandwidth of Transmission	9	MHz
