

Purpose of Proposed Modification to Call Sign E080209

DataPath, Inc. (DataPath) seeks to modify its existing license (E080209) for temporary fixed earth stations by adding 8 new models to operate in the Ku band. These units will be used to demonstrate the performance of the antennas at temporary locations and are intended to provide remote communications for aerospace, broadcast, government, and infrastructure customers. All operations under this proposed license amendment will be confined to the standard Ku band. All demonstrations at specific sites will be completed in less than 180 days with most demonstrations being completed within 30 days. All operations will comply with the notification and coordination requirements specified in Section 25.277 of the Commission's Rules.

DataPath seeks no other technical or operational modifications to license E080209. The two antennas already authorized under the license will continue to be used.
