

Exhibit 7 – Frequency Coordination

C-band –

Numerous C-band ESV interference studies and frequency coordinations have been completed in compliance with §25.228(h)(5). Notifications concerning completion of those coordinations have been filed with the Commission as specified in the regulations and the Notifications have been placed on Public Notice. Other coordinations may be completed as needed and if so, notifications for same will be filed with the Commission for Public Notice as they are completed.

Ku-band –

The coordination required by §25.228(j)(1) has been completed with NASA and the coordination filed with the Commission.

No coordination is being completed for the areas subject to §25.228(j)(3) as Marlink has implemented measures to prevent operation of Marlink ESIMs in the 14.47 – 14.5 GHz frequency band within the specified distances of the facilities protected per §25.228(j)(3). Marlink's system will automatically mute any Marlink ESIM operating in the 14.47 – 14.5 GHz frequency band which enters one of these designated areas.
