Re: Anuvu Licensing Holdings LLC – Application for Modification of License (Call Sign E080100) to add Horizons 2 at 73.8°WL as a point of communication

To whom it may concern

Intelsat is aware that Anuvu Licensing Holdings LLC is seeking to modify its current authorization to add Horizons 2 at 73.8°WL (S2423) as a point of communication for its earth station aboard aircraft (“ESAA”) license from the Federal Communication Commission (“FCC”), Call Sign E080100 and hereby confirms support for grant of the above reference modification application by Anuvu Licensing Holdings LLC.

Intelsat certifies that the use of ESAA terminals will be in accordance with the Intelsat license and existing coordination agreements with adjacent satellite operators within +/-6 degrees of the Horizons 2 orbital location.

Intelsat certifies that the use of the ESAA terminals will be consistent with the conditions on its grant (SAT-MOD-20200114-00009) for Horizons 2 operations at 73.8°WL (S2423).

In view of the above, the public interest would be served by grant of the Anuvu Licensing Holdings LLC modification application at the earliest practical time.

Sincerely,

Giselle Creeser
Director Spectrum Policy & Engineering
