

EXHIBIT 1
REQUEST TO MODIFY AUTHORIZATION FOR E050340

DIRECTV Enterprises, LLC (“DIRECTV”) hereby requests modification of its authorization to operate a transmit-only earth station (call sign E050340)¹ in Englewood, Colorado to change the authorized point of communication. This earth station is currently authorized to communicate with the DIRECTV 1R satellite (S2369), for which it provided telemetry, tracking & command (“TT&C”) capabilities. The DIRECTV 1R satellite has been successfully deorbited.

Accordingly, DIRECTV requests that the existing point of communication for earth station E050340 be replaced with “US LICENSED DIRECTV satellites at 101, 110, and 119 WL Clusters” utilizing the satellite arc, elevation, and azimuth limits provided in the attached Schedule B.

The requested modification will serve the public interest by enhancing the station’s capabilities to support DIRECTV’s provision of Direct Broadcast Services to consumers generally, and to support critical TT&C operations in particular.
