Let try this.

The google Earth picture of the KAPS-KBRC studio building sits to the NORTH of the Dish. The ground was dug at the time to support the new mount and transmission line. The dish location is:

48.26.21.29    122 20 45.22

The application has a 2 dropped from the Longitude.

The picture Trang sent is to the South-West of the studio.

The four towers in our picture is the PAREN Antenna of KAPS. Also the single 200ft tower North-East of the Paren antenna is not shown well.

Mike
