Use 36M0G7W. That is a zero, not an oh.

Thanks, but I still need the emission designator which is the representation of bandwidth of the emission carrier (i.e. 512KG7W, 36M0G7W, etc.) Emission designators are needed to

complete your application and make it acceptable for filling. The emission designator characterizes the communications signal being transmitted or received. Most cable operators file 36M0G7D or 36MG7W because they are operating with a 36MHz satellite transponder. If you want to investigate more, please read §2.201 Emission, modulation, and transmission characteristics.

Thanks,  
Trang

Hi Trang,

See the below notes in Yellow. Let me know if that is what you need or if you need something else from us.

Thanks,

Chad Larson
