

Exhibit A

(Page 1 of 1)

FAA Information

The proposed 3.8 meter C band R/O antenna, which is the subject of this application, is a fixed earth station that will be operated on the roof of an existing building structure. The existing building structure, and surrounding building structures, are higher in elevation (exceed the height) of the proposed antenna. The maximum height of the antenna will be about 4 meters above one of the roof lines/surfaces. Therefore since the proposed antenna does **not** extend above the existing building structure, notice to the FAA is **not** required pursuant to Section 17.4 of the Commission's rules.
