

E900630 Renewal Changes in Operating Parameters

The following changes in operating parameters are submitted as part of this license renewal application.

The maximum input power to the antenna flange is being reduced from 300 watts to 100 watts, resulting in the following changes:

- A. Maximum input power to the antenna flange: 100 Watts**
- B. Maximum Aggregate output EIRP for all carriers: 72.6 dBW**
- C. Maximum input power density at the antenna flange: - 18.29 dBW/4kHz**
- D. Maximum EIRP density: 34.31 dBW/4kHz**
- E. Maximum power density towards the horizon: - 6.76 dBW/4kHz**

There are no other changes to the emission or operating parameters of this license. In addition, a new RADHAZ study has been included as an exhibit to this application.
