

Explanatory Statement

Anuvu Licensing Holdings LLC provides this statement in connection with its application for renewal of the Ku-band satellite earth station license issued under Call Sign E070218 to report the following changes in equipment and operations:

- (1) The 4.5-meter Andrew antenna designated with the ID HOM E4.5-1 has been decommissioned and removed from the site. It can be removed from the renewed license.
- (2) The 6.3-meter Vertex antenna identified in the license with the ID HOM6.3-1 has been replaced with a technically identical GD Satcom 6.3-meter antenna.
- (3) The specific satellites identified in the license as points of communication have either been replaced by new satellites or the antennas have been repointed to use different space segment capacity, all of which are included in the FCC's current Approved Space Station List. Accordingly, the license needs only to specify "Permitted List" satellites for future use.
