Re: Request for STA To Temporarily Utilize Extended Ku-band Spectrum;
File No. SES-STA-20070518-00680

Dear Ms. Dortch:

On May 18, 2007, Grupo W Com, a wholly owned subsidiary of Pegaso Banda Ancha (collectively, "Pegaso") filed the above-referenced request for Special Temporary Authority ("STA") to access certain extended Ku-band spectrum using the 1.2 meter Andrews antenna specified in its existing, conventional Ku-band VSAT system (call sign E050244, file no. SES-MOD-20060718-01192).¹ By this letter, Pegaso clarifies that it seeks the STA solely on a temporary basis.

As mentioned in the exhibit to Pegaso's request, Pegaso seeks non-interfering, non-protected access to extended Ku-band spectrum due to the current shortage of affordable, conventional Ku-band capacity in the United States. Grant of the STA would allow Pegaso to promptly roll out broadband services to rural Latino and other underserved consumers. Pegaso would continue, however, to actively seek out access to conventional Ku-band capacity as market conditions evolve.

It bears mention that the 1.2 meter Andrews antenna described in Pegaso's STA request is designed for either conventional or extended Ku-band access. Accordingly, once affordable conventional Ku-band access becomes available, Pegaso will be able to efficiently vacate the extended Ku-band spectrum.

¹ As noted in the STA request, Pegaso would operate the VSAT system with an uplink at the 13.8-14.0 GHz band and a downlink at the 10.95-11.2 GHz and 11.45-11.7 GHz bands.

COVINGTON & BURLING LLP

Thank you again for your consideration of Pegaso's STA request. Please do not hesitate to direct any questions to the undersigned.

Sincerely,

A handwritten signature in black ink that reads "Matthew S. DelNero". The signature is written in a cursive style with a large, prominent "M" and "D".
