The referenced requests for extension of special temporary authority ARE GRANTED. GUSA Licensee LLC is authorized to operate a fixed earth station in Clifton Texas (E030266) in the 1610-1618.725MHz (Earth-to-space) and 2483.5-2500 MHz (space-to-Earth) frequency bands for test communications with Globalstar second generation satellites launched October 19, 2010 for an additional period beginning June 30 2011 and ending August 29, 2011 This temporary authorization is subject to the following further conditions.

1. All operations pursuant to this authorization shall be on an unprotected and non-harmful interference basis. Operations shall not cause harmful interference to, and GUSA Licensee LLC shall not claim protection from interference caused by, any other lawfully operating station. In the event that harmful interference results, operations shall cease immediately upon notification of such interference, and GUSA Licensee LLC shall immediately inform the Commission in writing of such event.
2. No authority for commercial operation is granted herein.

SES-MFS-20091221-01601

ITU Designation: HIBLEO-X

Dear Ms. De La Torre:

GUSA Licensee LLC (“Globalstar”) hereby requests a 60-day extension of previously granted Special Temporary Authority<sup>1</sup> (“STA”) for ten of its Commission-licensed antennas to communicate with its launched second-generation satellites for purposes of telemetry and control pending grant of the necessary authorizations and registration of its satellites by the government of France, as required by the Commission’s March 2011 *Order*.<sup>2</sup> Globalstar requests expedited treatment of this extension request because its existing STA for these earth stations expired

---

<sup>1</sup> See 47 C.F.R. § 25.120. The previously granted STA requests were: SES-STA-20110412-00445 (E050097); SES-STA-20110412-00446 (E050098); SES-STA-20110412-00447 (E050099); SES-STA-20110412-00448 (E050100); SES-STA-20110412-00439 (E970199); SES-STA-20110412-00440 (E000342); SES-STA-20110412-00441 (E000343); SES-STA-20110412-00442 (E000344); SES-STA-20110412-00443 (E000345); SES-STA-20110412-00444 (E030266). Technical exhibits for these antennas are attached to the instant request.

<sup>2</sup> See *Order, Globalstar Licensee LLC, Application for Modification of Non-geostationary Mobile Satellite Service Space Station License, GUSA Licensee LLC, Applications For Modification Of Mobile Satellite, Service Earth Station Licenses*, 26 FCC Rcd 3948, 3962 ¶ 35 (IB, rel. Mar. 18, 2011) (“*Order*”).

Ms. Mindel De La Torre  
June 29, 2011  
Page 2

between June 17 and June 22, 2011, and Globalstar requires the continued ability to communicate with its satellites from these antennas.<sup>3</sup>

As described in the *Order*, Globalstar has embarked on a transition to its second-generation satellite constellation.<sup>4</sup> This transition involves the launch of 24 new satellites, with the first batch of six satellites launched on October 19, 2010, and preparations for subsequent launches well under way.<sup>5</sup>

The Commission conditioned the grant of Globalstar's application, which includes the authority for its antennas to communicate with the second-generation satellites, upon Globalstar's receipt of certain French authorizations and international registration of Globalstar's satellites by the government of France.<sup>6</sup> Globalstar is in the midst of the authorization process in France and has submitted all relevant materials in connection with its application. Globalstar hopes to complete this process as expeditiously as possible. In the meantime, Globalstar must be able to continue effective control and monitoring of its launched satellites and, accordingly, requests authority to do so.

The public interest justifications for granting this authority remain substantially the same as those provided in the previous requests. In short, the public interest will be served by the grant of these STA requests because they will ensure effective control center communications with launched satellites, and these operations are necessary to ensure the provision of high quality service to U.S. customers.

Please do not hesitate to contact me with any questions.

---

<sup>3</sup> Details about individual STA terms are contained in the attached technical exhibits.

<sup>4</sup> *Order*, 26 FCC Rcd at 3590-591 ¶ 5.

<sup>5</sup> See Press Release, *Globalstar Prepares Six New Second-Generation Satellites For July Launch* (June 8, 2011), <http://www.globalstar.com/en/index.php?cid=7010&pressId=670>.

<sup>6</sup> See *Order*, 26 FCC Rcd at 3962 ¶ 35 (“The authority to operate granted in connection with these earth station applications shall become effective upon grant by France of an authorization for space operations under the June 3, 2008 French law n° 2008-518 relating to space operations, and only for communications with space stations for which France grants authority and undertakes to register under the United Nations Registration Convention.”).

## Special Temporary Authority Request

### Exhibit 2: Summary of IOT Earth Station Technical Information

Date submitted: June 29, 2011  
Applicant: GUSA Licensee LLC  
File Nos.: SES-MFS-20091221-01601  
Call Sign: E030266

#### Purpose of STA:

GUSA Licensee LLC ("GUSA") is seeking Special Temporary Authority to operate the IOT ("In-Orbit Test") antenna located at Clifton, TX to perform the transponder testing of the launched satellites to affirm the post-launch health to verify the performance characteristics of the individual Globalstar satellites.

In addition, GUSA is requesting authority to operate at a power higher than that specified in 47 C.F.R § 2.106, footnote 5.364 to support the transponder testing of the launched satellites. One of the primary tests to be performed for the health of the satellites is the determination and verification of spacecraft antenna patterns. Uplink, or spacecraft 1.6 GHz receive, antenna verification requires the use of an unmodulated carrier (CW) at an EIRP greater than that transmitted from a Globalstar handset transceiver. This increased EIRP is required in order to create sufficient dynamic range to provide the ability to measure peak-to-null antenna pattern variations of 30 dB. The performance of these In-Orbit-Tests will be crucial to the successful deployment of the replacement Globalstar spacecraft that are planned for the near future. The attached link budget in the Table 1 indicates the C/N expected with an EIRP of 19 dBW. As shown in the link budget, even with the level of 19 dBW, worst case C/N falls below the required dynamic range for the pattern measurements. This transmit level will be operated for short periods only during testing of the satellites at a fixed ground location at Clifton, TX.

Downlink, or spacecraft 2.4 GHz transmit, antenna verification requires the use of a high gain antenna which is accommodated by the receive function of the subject antenna.

STA term: 60 days (beginning on June 18, 2011)  
Site Location: Clifton, Texas  
Latitude: 31 ° 48 ' 2.1 " N  
Longitude: 97 ° 36 ' 46.0 " W  
Transmit frequency: 1610 – 1618.725 MHz

Receive frequency: 2483.5-2500 MHz

Polarization: LHCP

Antenna Size: 1.2 m

Gain: Tx: 23.4 dBi at 1.620 GHz

Rx: 26.7 dBi at 2.490 GHz

Maximum antenna height: 5 meters above ground level

Necessary Bandwidth: Transmit bandwidth is 8.725 MHz

Receive bandwidth is 16.5 MHz

Maximum carrier bandwidth is 50 kHz

Carrier: See table below

<u>Frequency Band (MHz)</u>	<u>T/R Mode &amp; Polarization</u>	<u>Emission Designator</u>	<u>Maximum EIRP (dBW)</u>	<u>Maximum EIRP Density (dBW/4kHz)</u>	<u>Modulation</u>
1610-1618.725	Tx – LHCP	N0N	19	19	Unmodulated CW for testing
2483.5-2500	Rx – RHCP	N0N			Unmodulated CW for testing

Satellite: HIBLEO-X GLOBALSTAR 2.0 (French-licensed Globalstar Big-LEO MSS system)

Orbital Location: NGSO (1414 km altitude, 52 degree inclination)

Elevation Angle (E/W): 5 degrees to 90 degrees

Azimuth (E/W): 0 degrees to 360 degrees

Satellite: S2115 (U.S.-licensed Globalstar Big LEO MSS system)

Orbital Location: NGSO (1414 km altitude, 52 degree inclination)

Elevation Angle (E/W): 5 degrees to 90 degrees

Azimuth (E/W): 0 degrees to 360 degrees

FAA notification is not required as the antenna structure does not exceed Part 17 notice criteria.

**Table 1 Link Budget for the IOT Antenna**

<b>Return Link: 1.6 GHz up/7 GHz down</b>		
	<u>Outer</u>	
<b>Uplink Analysis</b>		<b>Units</b>
Frequency	1.6	GHz
EIRP per user	19.0	dBW
Altitude	1414	km
User elevation angle	5	deg
Slant Range	3953	km
Path loss	-168.5	dB
Polarization & Tracking loss	-1	dB
S/C Rx Signal Strength	-150.5	dB
Satellite antenna gain	12.60	dBi
Line loss	-2.00	dB
User signal at transponder	-139.9	dBW
System noise temperature	396.64	K
Thermal noise density, No	-202.6	dBW/Hz
IOT measurement bandwidth	34.8	dB-Hz
Uplink C/(N)	27.9	dB
Nominal transponder gain	127.4	dB
<b>Downlink Analysis</b>		
Frequency	6.98	GHz
TX power per user	-8.4	dBW
Transmit line loss	-2.2	dB
Satellite antenna gain	4.00	dBi
EIRP per user	-6.5	dBW
GW elevation angle	5	deg
Range	3953	km
Free space loss (5 deg GW elev)	-181.3	dB
Polarization & tracking loss	-0.1	dB
Pointing loss	-1.0	dB
RX signal/user/satellite	-188.9	dBW
GW antenna gain (incl. line losses)	49.5	dBi
RX signal at antenna output/user/satellite	-139.4	dBW
System noise temperature	127.7	K
Thermal noise density, No	-207.5	dBW/Hz
Downlink C/(N)	33.4	dB
Overall (up&down) C/(N)	26.8	dB
Required Measurement Dynamic Range	30.0	dB
Worstcase Measurement C/N	-3.2
