Subject: RE: In case e-mail works better

You reported that an unusual phenomena of birds nesting in the KA399 LMA4T11N (9 m) antenna has cause a hazard that requires the current traffic to temporarily shift from the LMA4T11N to the 15M antenna. Current STA file number SES-STA-20120517-00450 was previously granted to communicate with Estrela Do Sol in the conventional Ku band. Due to the nature of this hazard a voice grant was given to include frequency band 13.959-13.970 GHz to support traffic shifting from the LMA4T11N antenna. This authorization will expire on 7-24-2012. Operations in this band are on a non interference basis.

As I stated in the voice-mail message I just left, I have a time-sensitive Telesat matter I need to discuss with you.
