Re: Request for Special Temporary Authority
Nuevo, California Earth Station E040125

Dear Ms. Dortch:

Intelsat License LLC (“Intelsat”) herein requests a grant of Special Temporary Authority (“STA”)¹ for 30 days, commencing August 5, 2014, to use its Nuevo, California C-band earth station -- call sign E040125 -- to provide launch and early orbit phase (“LEOP”) services for the AsiaSat-6 satellite that is expected to be launched on August 5, 2014.² The LEOP period is expected to last approximately ten days.³

The AsiaSat-6 LEOP operations will be performed using the following frequencies: 6429.00 MHz and 6431.00 MHz in the uplink (RHCP), and 4198.75 MHz and 4199.85 MHz in the downlink (LHCP). The LEOP operations will be coordinated with all operators of satellites that use the same frequency bands and are in the LEOP path. All operators of satellites in that path will be provided with an emergency phone number where the licensee can be reached in the event that harmful interference occurs.

The 24x7 contact information for the AsiaSat-6 LEOP mission is as follows:

Ph.: (202) 944-7701 – East Coast Operations Center (primary)
(310) 525-5900 – West Coast Operations Center (back-up)

Request to speak with Harry Burnham or Kevin Bell.

¹ Intelsat has filed its STA request, an FCC Form 159, a \$180.00 filing fee and this supporting letter electronically via the International Bureau’s Filing System (“IBFS”).

² The permanent orbital location for AsiaSat-6, which Intelsat understands is licensed by China, will be 120.0° E.L. The in-orbit testing location will be 119.65° E.L.

³ Intelsat is seeking authority for 30 days to accommodate possible launch delays.

Ms. Marlene H. Dortch

In further support of this request, Intelsat is attaching Exhibits A and B, which contain technical information that demonstrates that the operation of the earth station will be compatible with its electromagnetic environment and will not cause harmful interference into any lawfully operating terrestrial facility, as well as a waiver request. Intelsat also notes that for purposes of this AsiaSat-6 LEOP mission, it is seeking to operate in the frequencies listed in this request at power levels not to exceed 26.5 dBW. The technical information submitted with this STA request reflects a power level as high as 31.9 dBW because that is the level at which Intelsat might operate in the event an emergency necessitates the use of a higher power level in order to command the satellite. In the extremely unlikely event that harmful interference should occur due to transmissions to or from its earth station, Intelsat will take all reasonable steps to eliminate the interference.

Finally, Intelsat clarifies that during the AsiaSat-6 launch, the spacecraft will be controlled by Space Systems/Loral, which is the manager of the LEOP mission. Space Systems/Loral will build and send the commands to the Intelsat antenna, which will process and execute the commands. Telemetry received by Intelsat will be forwarded to Space Systems/Loral. Intelsat will remain in control of the baseband unit, RF equipment and antenna.

Grant of this STA request will allow Intelsat to help launch the AsiaSat-6 satellite. This, in turn, will help ensure continuity of service at the 120.0° E.L. orbital location and thereby promotes the public interest.

Please direct any questions regarding this STA request to the undersigned at (202) 944-7848.

Respectfully submitted,

Susan H. Crandall
Associate General Counsel
Intelsat Corporation
