Re: Request for Further Extension of Special Temporary Authority
Nuevo, California Earth Station E060384

Dear Ms. Dortch:

Intelsat License LLC (“Intelsat”) herein requests an additional 60 days—from December 25, 2014 through February 22, 2015—of the Special Temporary Authority (“STA”)¹ previously granted Intelsat to use its Nuevo, California Ku-band earth station—call sign E060384—to continue providing telemetry, tracking, and control (“TT&C”) services to Intelsat 30 at its permanent location of 95.05° W.L.² Intelsat has filed an application for a permanent modification to E060384 for TT&C operations at 95.05° W.L.³

Intelsat 30 arrived on-station at 95.05° W.L. on November 19, 2014. The satellite’s TT&C operations will continue to be performed in the following frequencies: 13750.5 MHz and 14003.50 MHz (LHCP) in the uplink and 11198.0 MHz, 11198.5 MHz, 11199.25 MHz, and 11199.75 MHz (RHCP) in the downlink.

Intelsat will continue to coordinate with all operators of satellites that use the same frequency bands and potentially affected by these operations at the 95.05° W.L. location. In the unlikely event that harmful interference occurs, Intelsat will take all necessary steps to eliminate the interference.

In further support of this extension request, Intelsat incorporates by reference the Exhibit A submitted with its original STA request, which contains technical information that demonstrates that the operation

¹ Intelsat has filed its STA request, an FCC Form 159, a \$195.00 filing fee, and this supporting letter electronically via the International Bureau’s Filing System (“IBFS”).

² See *Intelsat License LLC Request for Extension of Special Temporary Authority Using Earth Station E060384*, File No. SES-STA-20141119-00866 (filed Nov. 11, 2014); *Satellite Communications Services information; Actions Taken*, Report No. SES-01692, File No. SES-STA-20140922-00745 (Oct. 22, 2014) (Public Notice). The previous request for extension of STA included TT&C services at Intelsat 30’s in-orbit testing (“IOT”) location, TT&C services during the drift of the spacecraft from its 132.0° W.L. IOT location to its final location at 95.05° W.L., and TT&C services on-station at 95.05° W.L. Because Intelsat 30 is now on-station at 95.05° W.L., Intelsat is only seeking further extension of STA for TT&C services at 95.05° W.L.

³ See *Satellite Communications Services; Satellite Radio Applications Accepted for Filing*, Report No. SES-01700, File No. SES-MFS-20141030-00829 (Nov. 19, 2014) (Public Notice).

of the earth station will be compatible with its electromagnetic environment and will not cause harmful interference into any lawfully operating terrestrial facility, and the waiver request submitted with its original STA request. In the extremely unlikely event that harmful interference should occur due to transmissions to or from its earth station, Intelsat will take all reasonable steps to eliminate the interference. Intelsat also notes that for purposes of the Intelsat 30 mission, it is seeking to operate in the frequencies listed in this request at power levels not to exceed 28.7 dBW.

Grant of this STA further extension request will allow Intelsat to continue with the provision of TT&C services to the Intelsat 30 satellite at 95.05° W.L. which ensures safe station-keeping of the satellite. This, in turn, will help ensure continuity of service at the 95.05° W.L. orbital location and thereby promotes the public interest.

Please direct any questions regarding this STA request to the undersigned at (703) 559-6949.

Respectfully submitted,

A handwritten signature in blue ink that reads "Cynthia J. Grady". The signature is written in a cursive, flowing style.
