

TECHNICAL APPENDIX

2.4m ST5000-2.4 ESV Terminal (Ka-band) “CapRock1”

Order of Contents

- I. Technical Description
- II. Ka-band Antenna Gain Patterns & Associated Data
- III. Ka-band Off-Axis EIRP Patterns
- IV. FCC Declarations of Conformity
- V. Tracking Report
- VI. Radiation Hazard Study
- VII. Frequency Coordination Reports

ST5000-2.4 – Technical Description and Parameters

The ST5000-2.4 terminal is comprised of a 2.4m circular reflector antenna, an antenna positioner, and an antenna control module. The antenna positioner and control module are the same as those used in Harris CapRock’s SpaceTrack 4000 series of stabilized antennas. The SpaceTrack 4000 has been previously licensed by the FCC and has years of proven experience in the field. The reflector antenna has been tested extensively for RF performance, the comprehensive results of which are presented herein in conformance with the Commission’s Rules. Thus, the FCC can be assured that ST5000-2.4 will operate as designed to avoid potential interference to other spectrum users, including users of the Ka-band frequencies that are the subject of this application.

SUMMARY OF TECHNICAL PARAMETERS – ST5000-2.4

Characteristic	Ka-band
Antenna diameter	2.4m
Type of Antenna	Circular reflector
Peak Power (SSPA)	40 Watts
Transmit Bandwidth	1 MHz to 216 MHz
Transmit Gain	54.7 dBi
EIRP	68.9 dBW
Data Rate	40 Mbps Tx/ 300 Mbps Rx
Emission Designators	1M00G7D to 40M0G7D
Transmit Polarization	LHCP/RHCP
Transmit Max PSD	29.0 dBW/4kHz
Transmit Beamwidth	.14 degrees
Receive G/T	26.5 dB/K
Receive Bandwidth	Up to 216 MHz
Receive Polarization	LHCP and RHCP
Feed Flange Power	26.4 Watts
ERP	4.7 MW
Signal Modulation	Up to 32APSK

Pointing Accuracy and Automatic Muting. The ST5000-2.4 positioner system is designed to provide stable pointing to GSO satellites during range of motion associated with maritime operations, as well as track predictable NGSO satellite orbit paths under the same maritime operational conditions. Based on well-proven ST4000 antenna control technologies, the ST5000-2.4 has been tested and demonstrated extensively in fixed locations and in real-world maritime conditions. There have been no reported cases of interference in connection with recent test ST-5000-2.4 operations or ongoing ST4000 commercial maritime operations.

Harris CapRock demonstrates that the ST5000-2.4 terminal will not exceed the off-axis EIRP levels set forth in Section 25.138 of the Commission’s Rules governing Ka-band GSO FSS earth stations.¹ Furthermore, Harris CapRock’s ST5000-2.4 terminal is designed to meet the FCC’s requirements for Ku-band earth station onboard vessel (“ESV”) operations, including: (i) pointing accuracy of 0.2° or better; (ii) automatic cessation of emissions within 100 ms if pointing offset exceeds 0.5°; and (iii) transmissions will not resume until pointing accuracy is within 0.2°. The technical characteristics of the terminal’s positioner system are set forth in the follow tables.

ANTENNA MOTION PARAMETERS - ST5000-2.4

Azimuth	Continuous coverage over 360°
Elevation	0 to 90° antenna elevation
Position accuracy	Better than 0.2° (auto-disable at 0.5° offset)
Tracking capability	8°/sec

Harris CapRock has tested the pointing accuracy of the ST5000-2.4 terminal and provided summary results in the ST5000-2.4 Tracking Testing report. (See Technical Appendix, V., “Tracking Report”) As indicated in the *Tracking Report*, the 1 dB contour (i.e., a 1 dB reduction from peak boresite power) represents a 0.19° pointing offset. See *id.* at 4-5. In no case did the pointing offset of the ST5000-2.4 terminal exceed 1 dB (each “box” in the grids in the spectrum analyzer screen shots represents 1 dB). Thus, the tested pointing accuracy of the ST5000-2.4 terminal is better than 0.2°.

Compliant pointing accuracy is expected because the ST5000-2.4 terminal has the same positioner and pointing technology as Harris CapRock’s licensed ST4000 series terminals. Similarly, because the ST5000-2.4 terminal employs the same automatic muting technology and functionality as the previously licensed ESV terminals, it complies with the requirement to mute

¹ Harris CapRock acknowledges that the Commission has not adopted technical rules for Ka-band ESV operations. Accordingly, to the extent applicable, Harris CapRock demonstrates compliance with Sections 25.138 (Ka-band GSO FSS earth station operations) and 25.222 (Ku-band GSO FSS ESV operations) of the Commission’s Rules.

transmissions if pointing offset exceeds 0.5° and will not recommence transmissions until pointing offset is within 0.2°.

Sections 25.138 Off-Axis EIRP Spectral Density Limits. The ST5000-2.4 will operate in accordance with the off-axis EIRP spectral density limits for Ka-band GSO FSS earth stations set forth the Commission's Rules.² In the Technical Appendix, Harris CapRock provides a series of radiation patterns at the bottom, middle and top of Ka-band demonstrating that the ST5000-2.4 terminal will comply with the EIRP spectral density limits in Section 25.138 of the Commission's Rules and the Commission's two-degree spacing policies during Ka-band operations. Specifically, Harris CapRock provides co-polarized patterns in the azimuth plane at plus and minus 10 degrees and plus and minus 180 degrees, and in the elevation plane at plus and minus 30 degrees. Furthermore, Harris CapRock provides cross-polarized patterns at plus and minus 10 degrees in the azimuth and elevation planes.

Section 25.209 Gain Envelopes. Harris CapRock acknowledges that the ST5000-2.4 antenna will exceed the Commission's Section 25.209 gain envelopes at Ka-band at certain off-axis angles³ and hereby submits range test plots of the antenna gain patterns at the bottom, middle and top of the Ka-band. Harris CapRock will reduce transmit power spectral density to ensure that the off-axis EIRP spectral density limits set forth in Section 25.138 are satisfied. In addition, while Harris CapRock will operate in accordance with the Commission's Ka-band plan in certain frequencies while stationary, in no case will Harris CapRock seek receive protection greater than that of a Section 25.209-compliant antenna where any such protection be afforded to ST5000-2.4 receive operations.⁴

Pursuant to Section 25.138(e) of the Commission's Rules, Harris CapRock provides co-polarized and cross-polarization plots versus the FCC Section 25.209 gain mask in the E and H planes at 27.6520 GHz (bottom of band), 28.3615 GHz (middle of band) and 29.0710 GHz (top of band). (See Technical Appendix, II.) Consistent with the format identified in Section 25.138(d), Harris CapRock also provides the measured gain data for the ESV terminal in the azimuth plane at plus and minus 10 degrees and plus and minus 180 degrees, and in the elevation plane at plus and minus 30 degrees. Harris CapRock complies with Section 25.138(e) of the Commission's Rules by providing measured gain pattern values at the bottom, middle and top of the Ka-band.

In the following appendices, and draft Form 312 and Schedule B, Harris CapRock provides additional operational and technical information relating to the ST5000-2.4 terminal.

² See 47 C.F.R. § 25.138. The ST5000-2.4 terminal complies with off-axis EIRP spectral density limits in both the azimuth and elevation plane in the Ka-band.

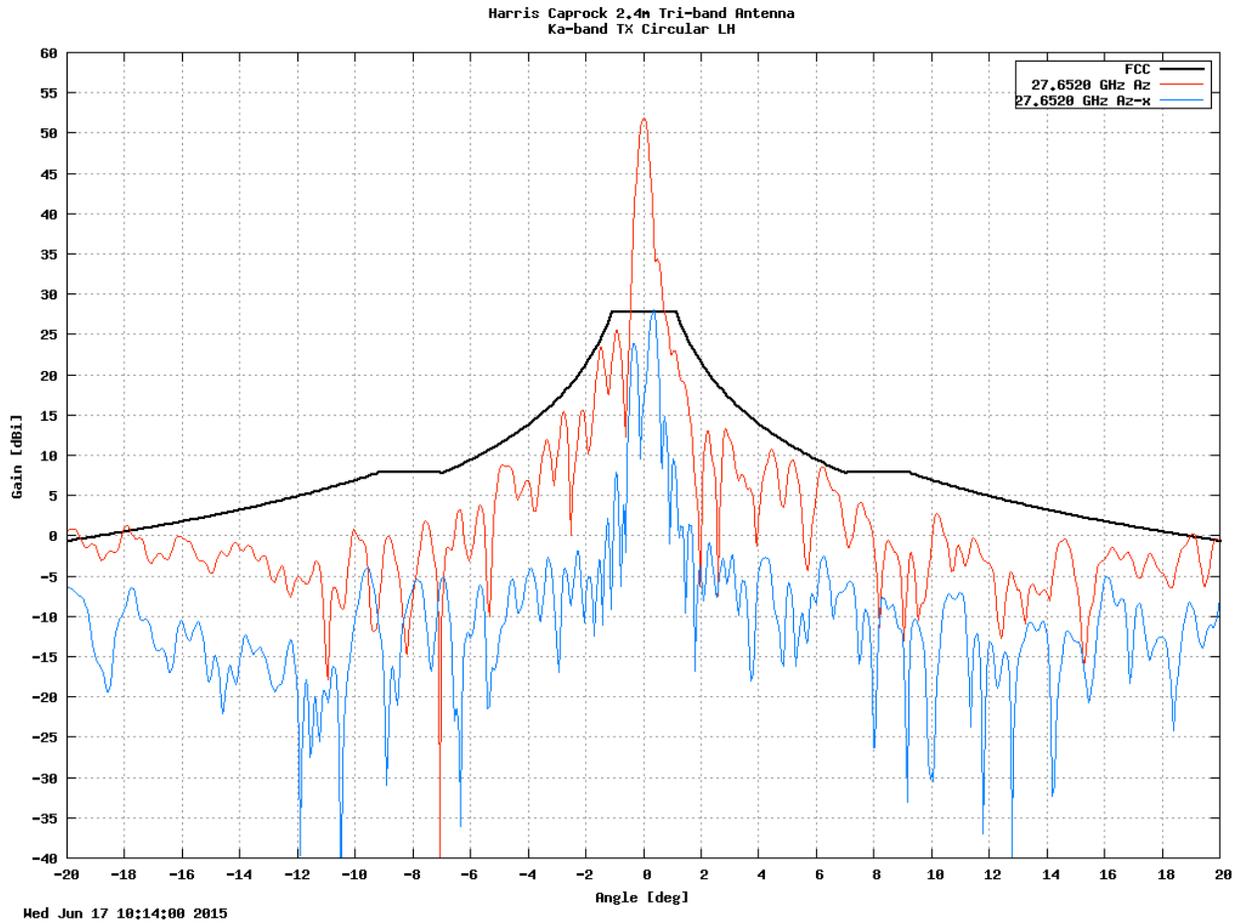

³ See 47 C.F.R. § 25.209.

⁴ Of course, no receive protection will be afforded to ST5000-2.4 terminal operations to the extent conducted on a non-conforming basis.

IV. FCC Declaration of Conformity

FCC Declaration of Conformity

1. Harris CapRock Communications, Inc. ("Harris CapRock") designs, develops and manufactures marine stabilized antenna systems for satellite communications at sea. These products are then used by our customers as part of their Earth Station onboard Vessel ("ESV") networks.
2. Section 25.138 of the Commission's rules, 47 C.F.R. § 25.138, defines the provisions for blanket licensing of earth stations operating in the Ka-band. Section 25.222 of the Commission's rules, 47 C.F.R. §§ 25.222, defines the provisions for blanket licensing of ESV terminals operating in the Ku-band. Because there are no technical rules governing ESV terminals operating in the Ka-band, Harris CapRock's Ka-band ESV terminals are designed to comply with the off-axis EIRP limits set forth in Section 25.138 and the pointing and cessation of emission requirements set forth in Section 25.222.
3. Harris CapRock hereby declares that the antennas listed below will meet the off-axis EIRP spectral density requirements of § 25.138(a)(1) with an N value of 1, when the following input power spectral density limitations are met:
 - 2.4 Meter Ka-Band, Model ST5000 is limited to: -3.0 dBW/4kHz
4. Harris CapRock further declares that the antenna referenced in paragraph 3 above, will maintain a stabilization pointing accuracy of better than 0.2 degrees under specified ship motion conditions, thus meeting the requirements of Section 25.222(a)(1)(ii)(A).
5. Harris CapRock hereby declares that the antenna referenced in paragraph 3 above, will automatically cease transmission within 100 milliseconds if the pointing error should exceed 0.5 degrees and will not resume transmission until the error drops below 0.2 degrees, thus meeting the requirements of Section 25.222(a)(1)(iii)(A).
6. Harris CapRock maintains all relevant test data, which is available upon request, to verify these declarations.

Health, Safety and Environment

Our dedication to employee safety is fundamental to the culture of our organization. We protect our employees by minimizing workplace risk and above all promoting a positive work ethos. We're dedicated to conducting business as responsible corporate citizens and are committed to business practices that support a sustainable global environment. Harris CapRock fulfils this commitment globally through compliance with applicable laws and regulations of the countries in which we operate.

We strive to:

- Improve the efficiency of our operations and processes
- Instruct and encourage employees to work in a safe, healthy and environmentally responsible manner
- Engage Harris CapRock supply chain partners to support our sustainability objectives through similar practices
- Enhance our customers' experience with our products and services by improving their eco-efficiency, while maintaining our high standards of quality, reliability and performance

Management Commitment

Paramount to our operation here at Harris CapRock is the health, safety and well-being of all our staff, contractors and clients. We aim for a no injury working environment and strive to demonstrate that "zero harm" is an achievable objective in all parts of our organization.

"At Harris CapRock, protecting the health and safety of our workforce, business partners and general public is our highest priority. We are fostering an increasingly proactive and vigilant HSE culture that is unwilling to accept any harm to people and our environment. If we cannot do business safely, we will not do business – no exceptions." **President, Harris CapRock Communications**

1 OVERVIEW4

2 MOTION TESTS RESULTS.....6

3 MOTION TABLE PHOTOGRAPHS – SEA STATE 412

4 CONCLUSION.....14

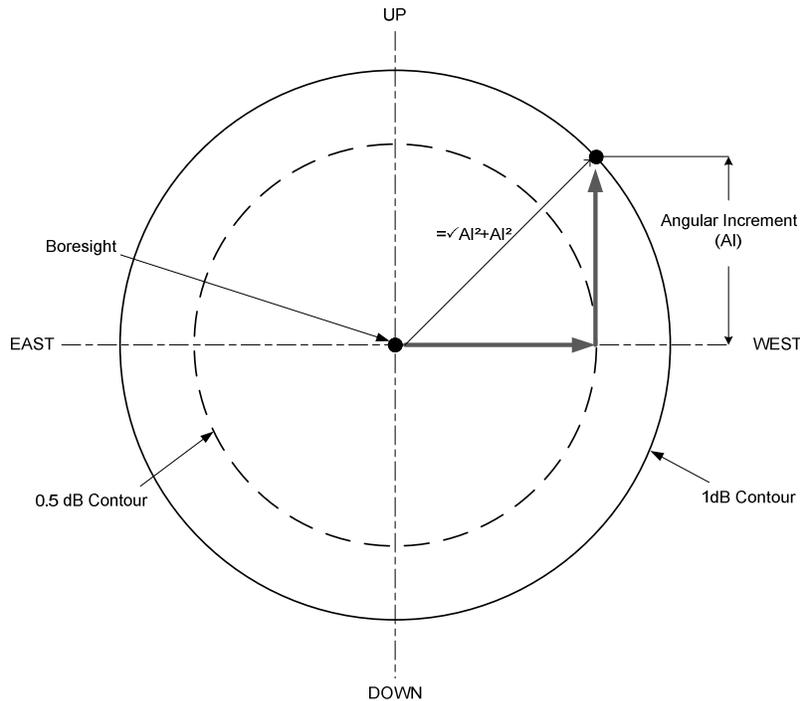

1 Overview

The motion tests were performed on a 6 axis motion table to verify the performance of the ST5024 system under motion at Ku band. The motion table was set up with motion parameters that mimic the expected range of motions that the Antenna will encounter during service on the various target vessels. The test data is derived from DOD-STD-1399(NAVY) sections 5.2.1.2 Loading factors, tables II, III and IV.

A range of roll periods are produced which reflect the uncertainty in the metacentric heights of the vessels. The worst case, (shortest), period was chosen for each test.

The results show the tracking performance in relations to the signal level received on a scale where each division on the spectrum analyser represents 1dB.

The principle in monitoring the tracking performance to be within +/- 1dB is the direct relationship between the signal level and the angular pointing accuracy with regard to bore sight and the 1dB contour as explained below:-

The angular increment (AI) for circular aperture antennas (as is the case with the ST5024) is represented by the following expression

$$AI = \frac{3.978}{d \cdot f}$$

where: d: Antenna diameter [m]
f: Frequency [GHz]

(Ref.: CCIR Handbook on Satellite Communications).

Therefore in the case of the antenna under test the $d = 2.4\text{m}$ and $f = 12\text{GHz}$

$$AI = 0.138^\circ$$

Which in turn makes the angle to the 1dB contour = $\sqrt{AI^2+AI^2}$ which equals 0.19° .

Therefore tracking within the 1dB division as shown on the spectrum analyser represents pointing accuracy better than 0.19°

The motion testing was performed at the GCSD R2 facility in Melbourne, FL. The tests were performed at Ku band on Intelsat GC3 95W Ku tracking an advanced VSAT network. The system was equipped with a 100W Ku LPOD, 200W C LPOD, 40W Ka CPI, E.2.

System on Motion Table

2 Motion tests results

2.1 Cross Polarisation Results:

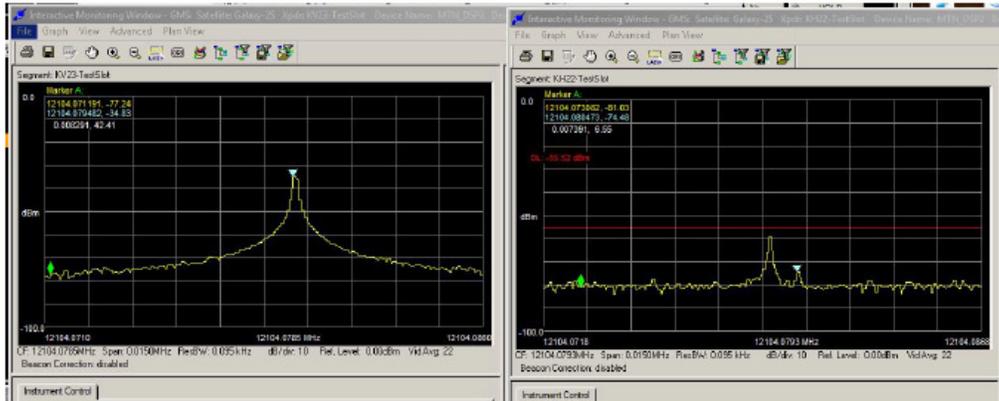

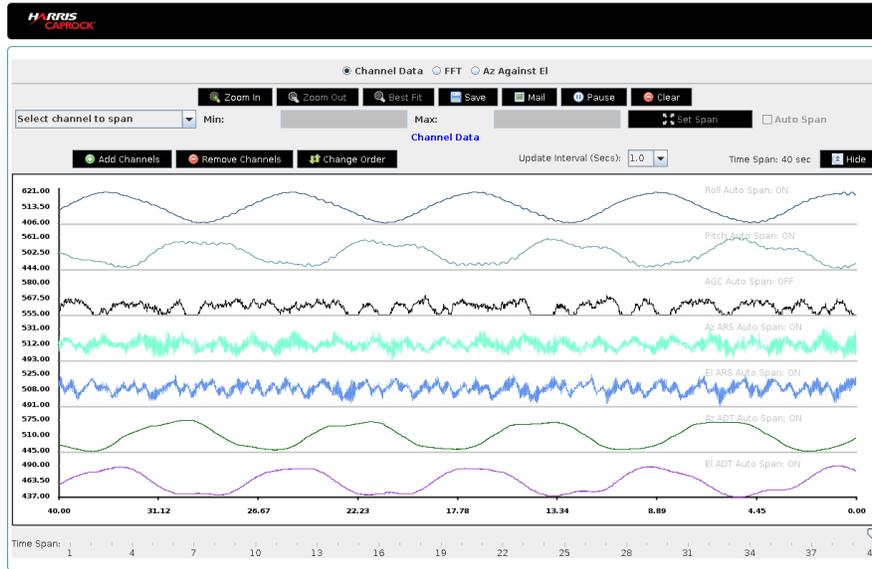

Figure E.1: Ku band cross pole isolation NOC data

2.2 Sea state 4 - 100m guided missile boat

Copyright © 2008-2013 Harris CapRock Communications

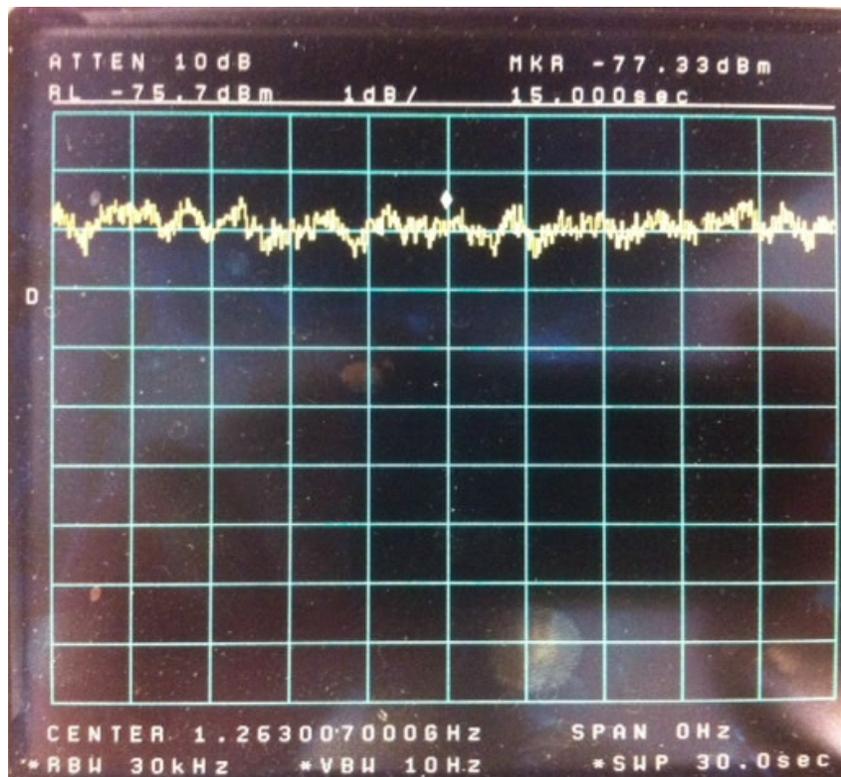

Figure E.3: 1/2 sea state 4, 17° Roll / 11 second period, 9.5° Pitch / 9 second period

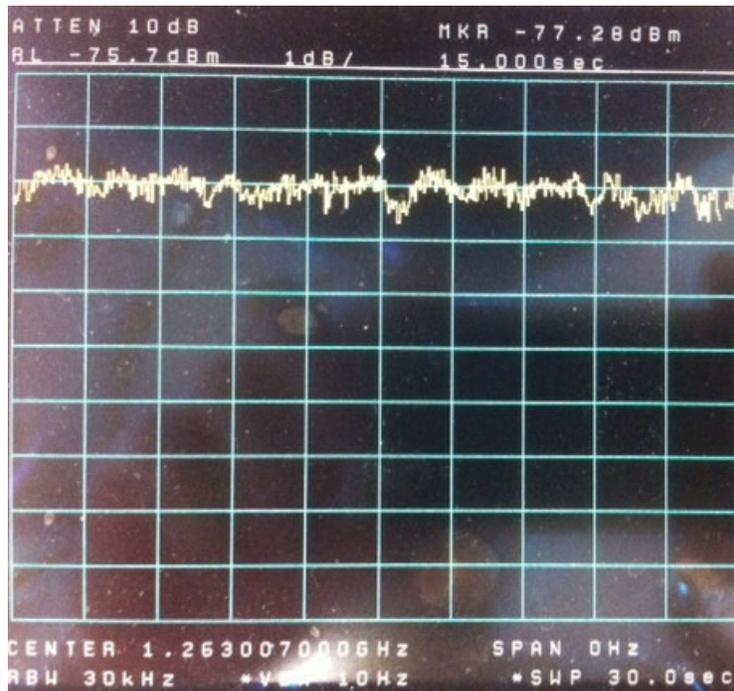

Figure E.4: Sea state 4, 17° Roll / 11 second period, 9.5° Pitch / 9 second period

2.3 Sea state 6 - 100m guided missile boat

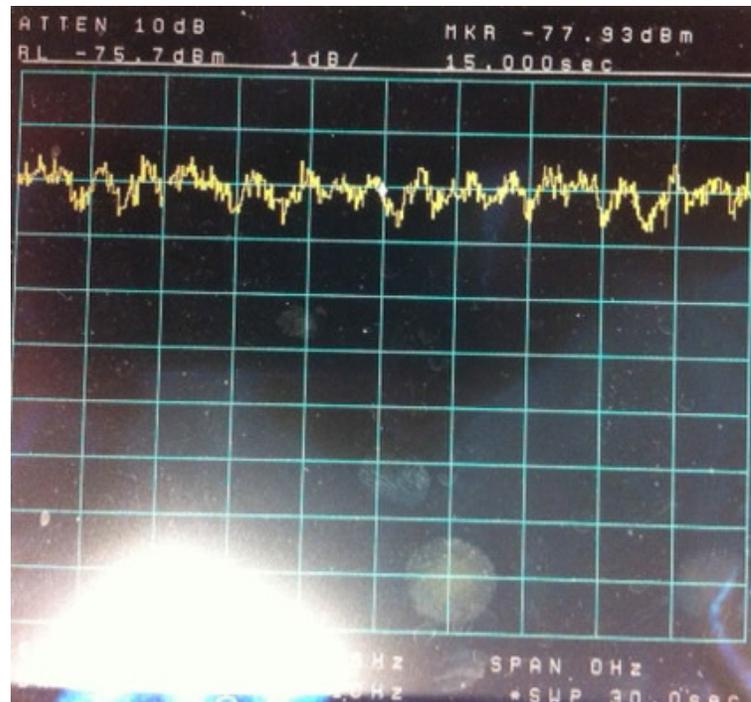

Figure E.5: Sea state 6, 41° Roll / 9 second period, 22° Pitch / 9 second period

2.4 Sea state 4 - 74m Supply Vessel, excessive pitch

The table can be seen to oscillate around the set point due to the high frequency biased tuning applied to the PLC. This provided a challenging, juddering, type motion for the system to track through.

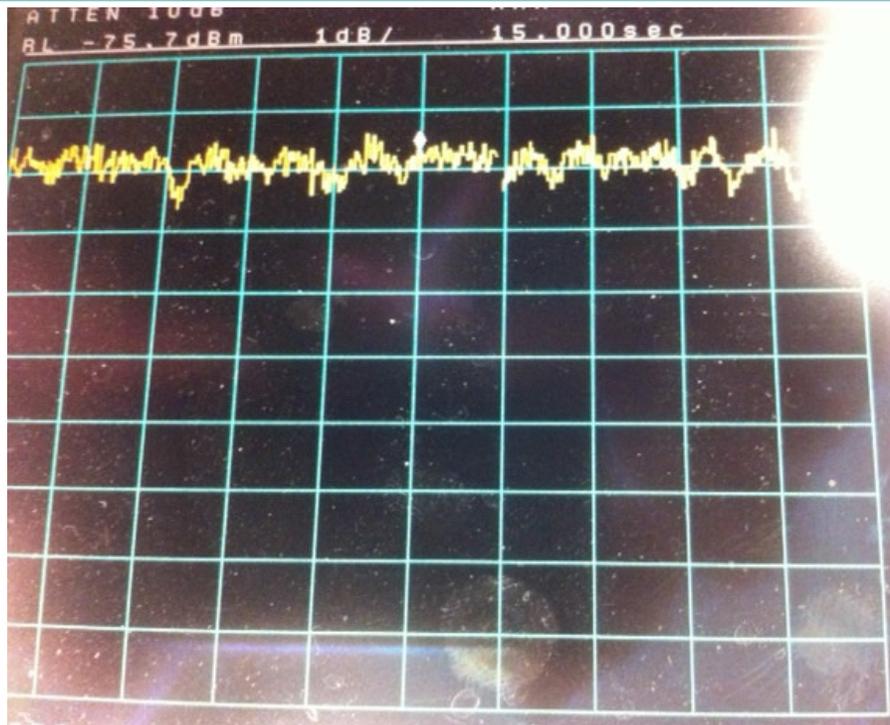

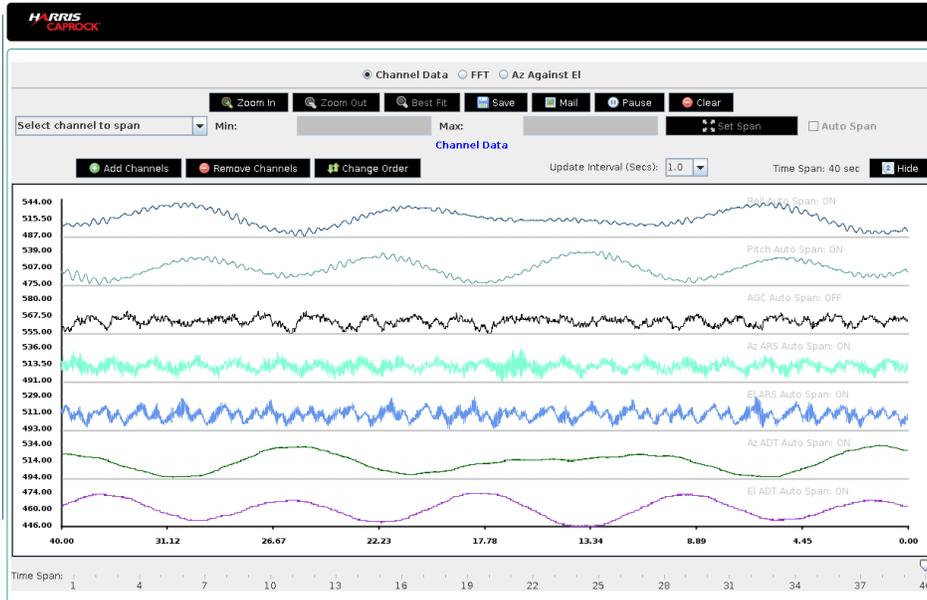

Figure E.7: Undefined sea state, PLC input 0.03/15, 0.05/10. 4.6° Roll / 9 second period, 5.21° Pitch / 14 second period

2.5 Sea state 4 - 360m Cruise Liner, excessive pitch

The table can be seen to oscillate around the set point due to the high frequency biased tuning applied to the PLC. This provided a challenging, juddering, type motion for the system to track through. The table did not appear to perform the motion correctly with regard to period.

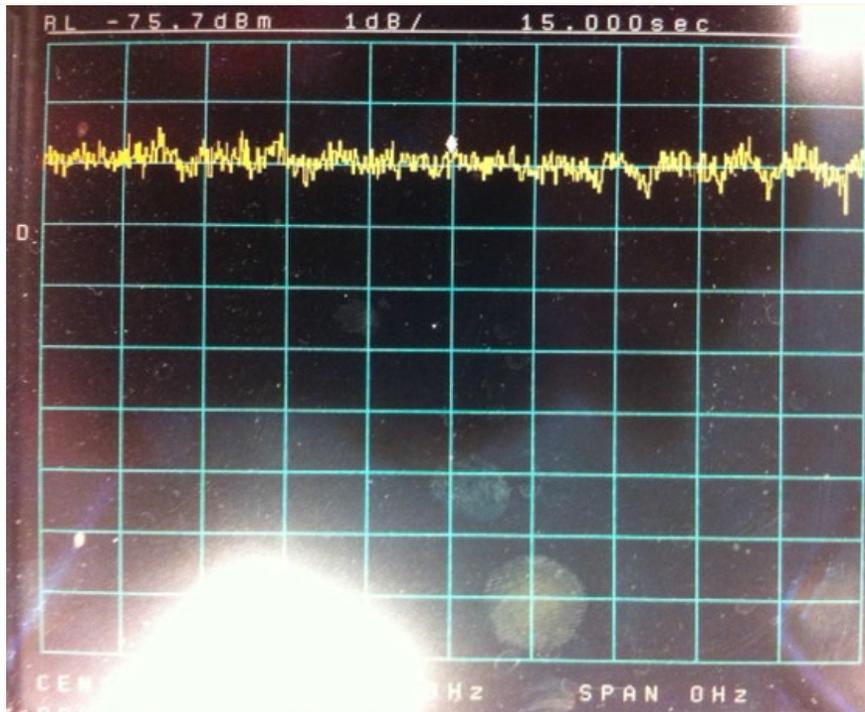

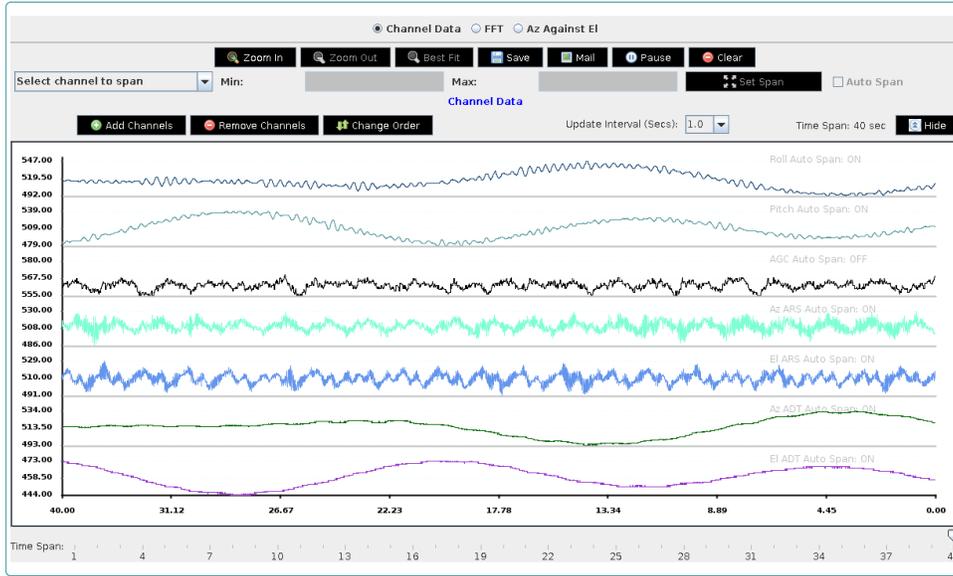

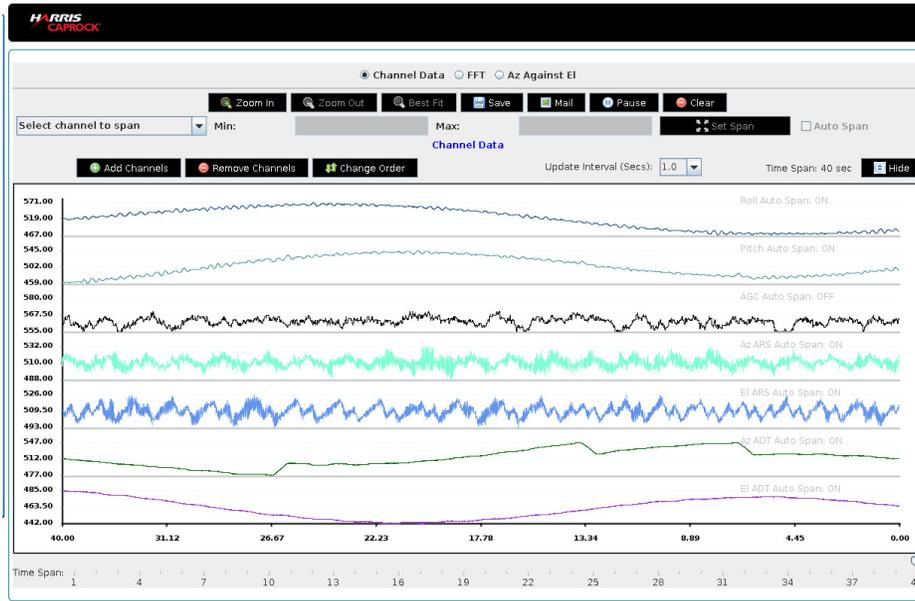

Figure E.8: Undefined sea state, PLC input 0.03/30, 0.05/20. 4.6° Roll / 18 second period, 5.21° Pitch / 28 second period

2.6 Sea state 5 - 360m Cruise Liner, excessive roll period, excessive pitch

The table can be seen to oscillate around the set point due to the high frequency biased tuning applied to the PLC. This provided a challenging, juddering, type motion for the system to track through. The table did not appear to perform the motion correctly with regard to period.

Figure E.9: Undefined sea state, PLC input 0.1/60, 0.1/40. 8.4° Roll / 40 second period, 7° Pitch / 40 second period

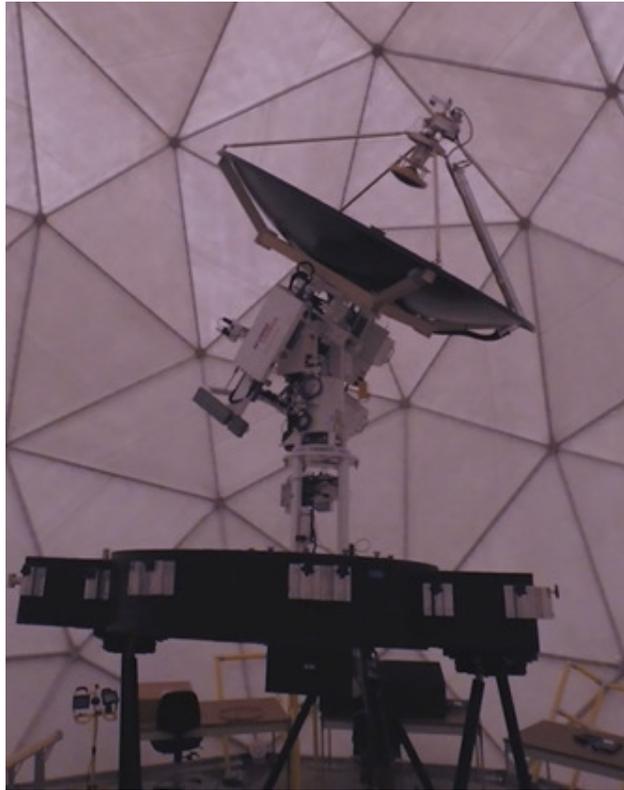

3.1 Motion Table Photographs – Sea State 4

Start (mid) position

Bow Pitch Up

Bow Pitch Down

4.0 Conclusion

As can be seen from the motion testing results the system is able to maintain the 1dB tracking under the various sea states tested.

In each case the system performed well within the 1dB limit and therefore had a pointing accuracy of better than the 0.2° requirement.

VI. Ka-band Radiation Hazard Study

Radiation Hazard Study

ST5000-2.4m

This study analyzes the potential Radio Frequency (RF) human exposure levels caused by the Electro Magnetic (EM) fields of the above-captioned antenna. The mathematical analysis performed below complies with the methods described in the Federal Communications Commission Office of Engineering and Technology Bulletin No. 65 (1985 rev. 1997) R&O 96-326.

Maximum Permissible Exposure

There are two separate levels of exposure limits. The first applies to persons in the general population who are in an uncontrolled environment. The second applies to trained personnel in a controlled environment. According to 47 C.F.R. § 1.1310, the Maximum Permissible Exposure (MPE) limits for frequencies above 1.5 GHz are as follows:

- General Population / Uncontrolled Exposure 1.0 mW/cm²
- Occupational / Controlled Exposure 5.0 mW/cm²

The purpose of this study is to determine the power flux density levels for the earth station under study as compared with the MPE limits. This comparison is done in each of the following regions:

1. Far-field region
2. Near-field region
3. Transition region
4. The region between the feed and the antenna surface
5. The main reflector region
6. The region between the antenna edge and the ground

Input Parameters

The following input parameters were used in the calculations:

<u>Parameter</u>	<u>Value</u>	<u>Unit</u>	<u>Symbol</u>
Antenna Diameter:	2.4	m	<i>D</i>
Antenna Transmit Gain:	54.67	dBi	<i>G</i>
Transmit Frequency:	28360	MHz	<i>f</i>
Feed Flange Diameter:	6.00	cm	<i>d</i>
Power Input to the Antenna:	40.00	W	<i>P</i>

Calculated Parameters

The following values were calculated using the above input parameters and the corresponding formulas.

<u>Parameter</u>	<u>Value</u>	<u>Unit</u>	<u>Symbol</u>	<u>Formula</u>
Antenna Surface Area:	4.52	m ²	<i>A</i>	$\pi D^2/4$
Area of Feed Flange:	28.27	cm ²	<i>a</i>	$\pi d^2/4$
Antenna Efficiency:	0.58		η	$G\lambda^2/(\pi^2 D^2)$
Gain Factor:	293001.00		<i>g</i>	$10^{G/10}$
Wavelength:	0.0106	m	λ	$300/f$

Behavior of EM Fields as a Function of Distance

The behavior of the characteristics of EM fields varies depending on the distance from the radiating antenna. These characteristics are analyzed in three primary regions: the near-field region, the far-field region and the transition region. Of interest also are the region between the antenna main reflector and the subreflector, the region of the main reflector area and the region between the main reflector and ground.

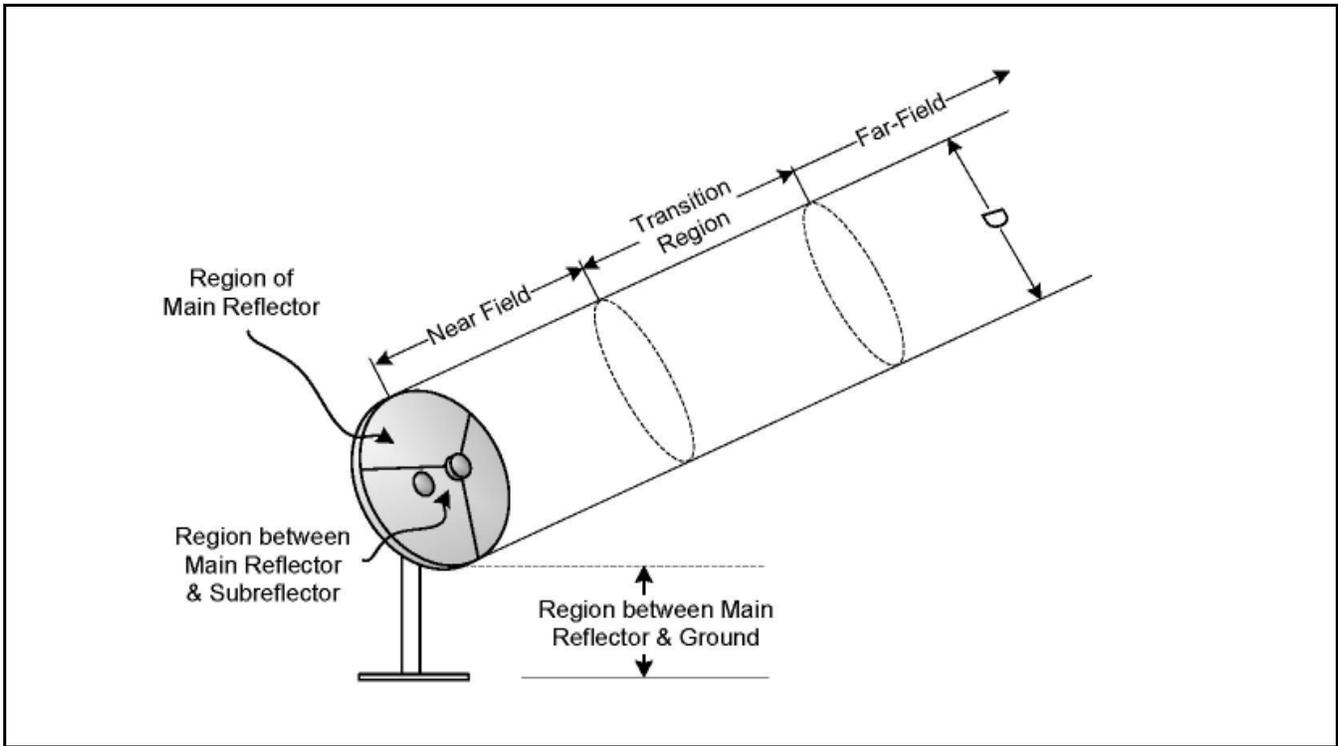

Figure 1. EM Fields as a Function of Distance

For parabolic aperture antennas with circular cross sections, such as the antenna under study, the near-field, far-field and transition region distances are calculated as follows:

<u>Parameter</u>	<u>Value</u>	<u>Unit</u>	<u>Formula</u>
Near Field Distance:	136.128	m	$R_{nf} = D^2/(4\lambda)$
Distance to Far Field:	326.707	m	$R_{ff} = 0.60D^2/(\lambda)$
Distance of Transition Region	136.128	m	$R_t = R_{nf}$

The distance in the transition region is between the near and far fields. Thus, $R_{nf} \leq R_t \leq R_{ff}$. However, the power density in the transition region will not exceed the power density in the near-field. Therefore, for purposes of the present analysis, the distance of the transition region can equate the distance to the near-field.

Power Flux Density Calculations

The power flux density is considered to be at a maximum through the entire length of the near-field. This region is contained within a cylindrical volume with a diameter, D, equal to the diameter of the antenna. In the transition region and the far-field, the power density decreases inversely with the square of the distance. The following equations are used to calculate power density in these regions.

<u>Parameter</u>	<u>Value</u>	<u>Unit</u>	<u>Symbol</u>	<u>Formula</u>
Power Density in the Near-Field	2.040	mW/cm ²	S_{nf}	$16.0 \eta P / (\pi D^2)$
Power Density in the Far-Field	0.874	mW/cm ²	S_{ff}	$GP / (4\pi R_{ff}^2)$
Power Density in the Trans. Region	2.040	mW/cm ²	S_t	$S_{nf} R_{nf} / (R_t)$

The region between the main reflector and the subreflector is confined within a conical shape defined by the feed assembly. The most common feed assemblies are waveguide flanges. This energy is determined as follows:

<u>Parameter</u>	<u>Value</u>	<u>Unit</u>	<u>Symbol</u>	<u>Formula</u>
Power Density at the Feed Flange	5658.8	mW/cm ²	S_{fa}	$4P / a$

The power density in the main reflector is determined similarly to the power density at the feed flange; except that the area of the reflector is used.

<u>Parameter</u>	<u>Value</u>	<u>Unit</u>	<u>Symbol</u>	<u>Formula</u>
Power Density at Main Reflector	3.537	mW/cm ²	$S_{surface}$	$4P / A$

The power density between the reflector and ground, assuming uniform illumination of the reflector surface, is calculated as follows:

<u>Parameter</u>	<u>Value</u>	<u>Unit</u>	<u>Symbol</u>	<u>Formula</u>
Power Density between Reflector and Ground	0.884	mW/cm ²	S_g	P / A

Table 1 summarizes the calculated power flux density values for each region. In a controlled environment, the only regions that exceed FCC limitations are shown below. These regions are only accessible by trained technicians who, as a matter of procedure, turn off transmit power before performing any work in these areas.

Power Densities	mW/cm2	Controlled Environment (5 mW/cm2)
Far Field Calculation	0.874	Satisfies FCC Requirements
Near Field Calculation	2.040	Satisfies FCC Requirements
Transition Region	2.040	Satisfies FCC Requirements
Region between Main and Subreflector	5658.8	Exceeds Limitations
Main Reflector Region	3.537	Satisfies FCC Requirements
Region between Main Reflector and Ground	0.884	Satisfies FCC Requirements

Table 1. Power Flux Density for Each Region

In conclusion, the results show that the antenna, in a controlled environment, and under the proper mitigation procedures, meets the guidelines specified in 47 C.F.R. § 1.1310.

VII. Frequency Coordination Reports

Ka-Band Earth Station – Miami, FL

Frequency Coordination Report

28 GHz

Prepared on Behalf of
Harris CapRock
Communications

February 15, 2016

COMSEARCH
A CommScope Company

Table of Contents

1. Summary of Results	- 1 -
2. 28 GHz Common Carrier and LTTS Coordination	- 1 -
3. 28 GHz LMDS Coordination	- 2 -
4. Earth Station Coordination Data	- 3 -
5. Contact Information	- 7 -

1. Summary of Results

On behalf of Harris CapRock Communications, Comsearch performed a coordination notice for all existing and proposed terrestrial licenses within the coordination contours of their proposed Ka-Band earth station in Miami, Florida, which will transmit at 28 GHz¹. Prior-notification letters were sent to the licensees and a copy of the notification data is provided in section four of this report. The earth station coordination was finalized on February 15, 2016.

No objections were received from any of the incumbent 28 GHz licensees. Our notification to the LMDS incumbents was performed under the assumption that the earth station would be operating on a secondary basis to LMDS Block A operations and a contact at Harris CapRock Communications has been provided in case any concerns may arise in the future.

2. 28 GHz Common Carrier and LTTTS Coordination

In accordance with FCC Rules and Regulations, the Ka-Band earth station in Miami, Florida was prior-coordinated by Comsearch. A notification letter and datasheet for this earth station were sent to the following 28 GHz common carrier fixed microwave licensee on January 12, 2016. This licensee is authorized to operate temporary fixed operations from 27.5 to 29.5 GHz on a nationwide basis.

Licensee	Authorized Geographic Area
Verizon	Continental US

A notification letter and datasheets for the Ka-Band earth station in Miami, Florida were also sent to the following 28 GHz local television transmission licensee on January 12, 2016. This licensee is authorized to operate temporary fixed operations from 27.5 to 29.5 GHz on a nationwide basis.

Licensee	Authorized Geographic Area
Information Super Station, LLC	Continental US

No objections were received from the common carrier or local television transmission service incumbents.

¹ The proposed earth station will operate in the 27.6 – 29.1 GHz portion of the Ka-Band.

3. 28 GHz LMDS Coordination

A Notification letter was sent to the following 28 GHz LMDS licensees on January 12, 2016. The proposed earth station will operate on frequencies that overlap Block A of the LMDS service. The total frequency allocation for Block A of the LMDS spectrum appears below.

Block A: 27.500-28.350 GHz
29.100-29.250 GHz
31.075-31.225 GHz

Licensee	Market	Market Name
Nextlink/XO	BTA293 ²	Miami-Ft. Lauderdale, FL
T-Mobile ³	BTA293	Miami-Ft. Lauderdale, FL
Nextlink/XO	BTA469	West Palm Beach-Boca Raton, FL
T-Mobile ⁴	BTA469	West Palm Beach-Boca Raton, FL

No objections were received from the LMDS incumbents.

² The proposed earth station is located in BTA293.

³ T-Mobile has acquired spectrum from Nextlink/XO in the Miami-Ft. Lauderdale Basic Trading Area (BTA).

⁴ T-Mobile has acquired spectrum from Nextlink/XO in the West Palm Beach-Boca Raton BTA.

4. Earth Station Coordination Data

This section presents the data pertinent to the proposed Ka-Band earth station in Miami, Florida. This data was circulated to all incumbent licensees in the shared 28 GHz frequency ranges.

Ka-Band Earth Station – Port Canaveral, FL

Frequency Coordination Report

28 GHz

Prepared on Behalf of
Harris CapRock
Communications

February 15, 2016

COMSEARCH
A CommScope Company

Table of Contents

1. Summary of Results	- 1 -
2. 28 GHz Common Carrier and LTTS Coordination	- 1 -
3. 28 GHz LMDS Coordination	- 2 -
4. Earth Station Coordination Data	- 3 -
5. Contact Information	- 7 -

1. Summary of Results

On behalf of Harris CapRock Communications, Comsearch performed a coordination notice for all existing and proposed terrestrial licenses within the coordination contours of their proposed Ka-Band earth station in Port Canaveral, Florida, which will transmit at 28 GHz¹. Prior-notification letters were sent to the licensees and a copy of the notification data is provided in section four of this report. The earth station coordination was finalized on February 15, 2016.

No objections were received from any of the incumbent 28 GHz licensees. Our notification to the LMDS incumbents was performed under the assumption that the earth station would be operating on a secondary basis to LMDS Block A operations and a contact at Harris CapRock Communications has been provided in case any concerns may arise in the future.

2. 28 GHz Common Carrier and LTTTS Coordination

In accordance with FCC Rules and Regulations, the Ka-Band earth station in Port Canaveral, Florida was prior-coordinated by Comsearch. A notification letter and datasheet for this earth station were sent to the following 28 GHz common carrier fixed microwave licensee on January 12, 2016. This licensee is authorized to operate temporary fixed operations from 27.5 to 29.5 GHz on a nationwide basis.

Licensee	Authorized Geographic Area
Verizon	Continental US

A notification letter and datasheets for the Ka-Band earth station in Port Canaveral, Florida were also sent to the following 28 GHz local television transmission licensee on January 12, 2016. This licensee is authorized to operate temporary fixed operations from 27.5 to 29.5 GHz on a nationwide basis.

Licensee	Authorized Geographic Area
Information Super Station, LLC	Continental US

No objections were received from the common carrier or local television transmission service incumbents.

¹ The proposed earth station will operate in the 27.6 – 29.1 GHz portion of the Ka-Band.

3. 28 GHz LMDS Coordination

A Notification letter was sent to the following 28 GHz LMDS licensees on January 12, 2016. The proposed earth station will operate on frequencies that overlap Block A of the LMDS service. The total frequency allocation for Block A of the LMDS spectrum appears below.

Block A: 27.500-28.350 GHz
29.100-29.250 GHz
31.075-31.225 GHz

Licensee	Market	Market Name
Nextlink/XO	BTA212	Jacksonville, FL
T-Mobile ²	BTA212	Jacksonville, FL
Wireless Distribution Services	BTA239	Lakeland-Winter Haven, FL
Rainier Connect	BTA326	Ocala, FL
Straight Path Spectrum	BTA336	Orlando, FL
T-Mobile ³	BTA336	Orlando, FL
Nextlink/XO	BTA440	Tampa-St. Petersburg-Clearwater, FL
T-Mobile ⁴	BTA440	Tampa-St. Petersburg-Clearwater, FL
Nextlink/XO	BTA469	West Palm Beach-Boca Raton, FL
T-Mobile ⁵	BTA469	West Palm Beach-Boca Raton, FL

No objections were received from the LMDS incumbents.

² T-Mobile has acquired spectrum from Nextlink/XO in the Jacksonville Basic Trading Area (BTA).

³ T-Mobile has acquired spectrum from Straight Path Spectrum in the Orlando BTA.

⁴ T-Mobile has acquired spectrum from Nextlink/XO in the Tampa—St. Petersburg—Clearwater BTA.

⁵ T-Mobile has acquired spectrum from Nextlink/XO in the West Palm Beach—Boca Raton BTA.

4. Earth Station Coordination Data

This section presents the data pertinent to the proposed Ka-Band earth station in Port Canaveral, Florida. This data was circulated to all incumbent licensees in the shared 28 GHz frequency ranges.

5. Contact Information	- 7 -

1. Summary of Results

On behalf of Harris CapRock Communications, Comsearch performed a coordination notice for all existing and proposed terrestrial licenses within the coordination contours of their proposed Ka-Band earth station in Ft. Lauderdale, Florida, which will transmit at 28 GHz¹. Prior-notification letters were sent to the licensees and a copy of the notification data is provided in section four of this report. The earth station coordination was finalized on February 15, 2016.

No objections were received from any of the incumbent 28 GHz licensees. Our notification to the LMDS incumbents was performed under the assumption that the earth station would be operating on a secondary basis to LMDS Block A operations and a contact at Harris CapRock Communications has been provided in case any concerns may arise in the future.

2. 28 GHz Common Carrier and LTTTS Coordination

In accordance with FCC Rules and Regulations, the Ka-Band earth station in Ft. Lauderdale, Florida was prior-coordinated by Comsearch. A notification letter and datasheet for this earth station were sent to the following 28 GHz common carrier fixed microwave licensee on January 12, 2016. This licensee is authorized to operate temporary fixed operations from 27.5 to 29.5 GHz on a nationwide basis.

Licensee	Authorized Geographic Area
Verizon	Continental US

A notification letter and datasheets for the Ka-Band earth station in Ft. Lauderdale, Florida were also sent to the following 28 GHz local television transmission licensee on January 12, 2016. This licensee is authorized to operate temporary fixed operations from 27.5 to 29.5 GHz on a nationwide basis.

Licensee	Authorized Geographic Area
Information Super Station, LLC	Continental US

No objections were received from the common carrier or local television transmission service incumbents.

¹ The proposed earth station will operate in the 27.6 – 29.1 GHz portion of the Ka-Band.

3. 28 GHz LMDS Coordination

A Notification letter was sent to the following 28 GHz LMDS licensees on January 12, 2016. The proposed earth station will operate on frequencies that overlap Block A of the LMDS service. The total frequency allocation for Block A of the LMDS spectrum appears below.

Block A: 27.500-28.350 GHz
29.100-29.250 GHz
31.075-31.225 GHz

Licensee	Market	Market Name
Nextlink/XO	BTA293 ²	Miami-Ft. Lauderdale, FL
T-Mobile ³	BTA293	Miami-Ft. Lauderdale, FL
Nextlink/XO	BTA469	West Palm Beach-Boca Raton, FL
T-Mobile ⁴	BTA469	West Palm Beach-Boca Raton, FL

No objections were received from the LMDS incumbents.

² The proposed earth station is located in BTA293.

³ T-Mobile has acquired spectrum from Nextlink/XO in the Miami-Ft. Lauderdale Basic Trading Area (BTA).

⁴ T-Mobile has acquired spectrum from Nextlink/XO in the West Palm Beach-Boca Raton BTA.

4. Earth Station Coordination Data

This section presents the data pertinent to the proposed Ka-Band earth station in Ft. Lauderdale, Florida. This data was circulated to all incumbent licensees in the shared 28 GHz frequency ranges.

Ka-Band Earth Station – San Juan, PR

Frequency Coordination Report

28 GHz

Prepared on Behalf of
Harris CapRock
Communications

February 15, 2016

COMSEARCH
A CommScope Company

Table of Contents

1. Summary of Results	- 1 -
2. 28 GHz Common Carrier and LTTS Coordination	- 1 -
3. 28 GHz LMDS Coordination	- 2 -
4. Earth Station Coordination Data	- 3 -
5. Contact Information	- 7 -

1. Summary of Results

On behalf of Harris CapRock Communications, Comsearch performed a coordination notice for all existing and proposed terrestrial licenses within the coordination contours of their proposed Ka-Band earth station in San Juan, Puerto Rico, which will transmit at 28 GHz¹. Prior-notification letters were sent to the licensees and a copy of the notification data is provided in section four of this report. The earth station coordination was finalized on February 15, 2016.

No objections were received from any of the incumbent 28 GHz licensees. Our notification to the LMDS incumbents was performed under the assumption that the earth station would be operating on a secondary basis to LMDS Block A operations and a contact at Harris CapRock Communications has been provided in case any concerns may arise in the future.

2. 28 GHz Common Carrier and LTTTS Coordination

In accordance with FCC Rules and Regulations, the Ka-Band earth station in San Juan, Puerto Rico was prior-coordinated by Comsearch. A notification letter and datasheet for this earth station were sent to the following 28 GHz common carrier fixed microwave licensee on January 12, 2016. This licensee is authorized to operate temporary fixed operations from 27.5 to 29.5 GHz on a nationwide basis.

Licensee	Authorized Geographic Area
Verizon	Continental US

A notification letter and datasheets for the Ka-Band earth station in San Juan, Puerto Rico were also sent to the following 28 GHz local television transmission licensee on January 12, 2016. This licensee is authorized to operate temporary fixed operations from 27.5 to 29.5 GHz on a nationwide basis.

Licensee	Authorized Geographic Area
Information Super Station, LLC	Continental US

No objections were received from the common carrier or local television transmission service incumbents.

¹ The proposed earth station will operate in the 27.6 – 29.1 GHz portion of the Ka-Band.

3. 28 GHz LMDS Coordination

A Notification letter was sent to the following 28 GHz LMDS licensees on January 12, 2016. The proposed earth station will operate on frequencies that overlap Block A of the LMDS service. The total frequency allocation for Block A of the LMDS spectrum appears below.

Block A: 27.500-28.350 GHz
29.100-29.250 GHz
31.075-31.225 GHz

Licensee	Market	Market Name
Lightspeed PR	BTA488 ²	San Juan, PR
Lightspeed PR	BTA489	Mayaguez-Aguadilla-Ponce, PR

No objections were received from the LMDS incumbents.

² The proposed earth station is located in BTA488.

4. Earth Station Coordination Data

This section presents the data pertinent to the proposed Ka-Band earth station in San Juan, Puerto Rico. This data was circulated to all incumbent licensees in the shared 28 GHz frequency ranges.
