Intelsat License LLC is granted special temporary authority (STA) beginning January 1, 2017, for 30 days, to operate its fixed earth stations in Riverside, CA; Castle Rock, CO; Hagerstown, MD; and Ellenwood, GA call signs: E060384, E030096, E140121, E940532, KA258, KL92 to provide telemetry, tracking, and command ("TT &C") to the Intelsat 1R (S2368) satellite during its drift from 50.1° W.L. to 169.2° E.L. orbital locations on the 13995 MHz and 14498.5 MHz (Earth-to-space); and 11696 MHz and 11697 MHz (space-to-Earth) center frequencies under the following conditions:

- 1. Grant of this STA is without prejudice to any determination that the Commission may make regarding pending or future Intelsat applications.
- 2. All operations under this grant of STA shall be on an unprotected and non-harmful interference basis. Intelsat shall not cause harmful interference to, and shall not claim protection from interference caused to it by, any other lawfully operating radio communication system.
- 3. In the event of any harmful interference as a result of operations under this grant Intelsat License LLC shall cease operations immediately upon notification of such interference and shall immediately inform the Commission, in writing, of such an event.
- 4. Any action taken or expense incurred as a result of operations pursuant to this STA is solely at Intelsat License LLC's risk.

This grant is issued pursuant to Section 0.261 of the Commission's rules on delegated authority, 47 C.F.R. § 0.261, and is effective upon release.

## FCC NOTICE REQUIRED BY THE PAPERWORK REDUCTION ACT

The public reporting for this collection of information is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the required data, and completing and reviewing the collection of information. If you Federal Communications Commission, AMD-PERM, Paperwork Reduction Project (3060-0678), Washington, DC 20554. We will also accept your comments regarding the Paperwork Reduction Act aspects of this collection via the Internet if you send them to PRA@fcc.gov. PLEASE have any comments on this burden estimate, or how we can improve the collection and reduce the burden it causes you, please write to the DO NOT SEND COMPLETED FORMS TO THIS ADDRESS.

Remember - You are not required to respond to a collection of information sponsored by the Federal government, and the government may not conduct or sponsor this collection, unless it displays a currently valid OMB control number or if we fail to provide you with this notice. collection has been assigned an OMB control number of 3060-0678. THE FOREGOING NOTICE IS REQUIRED BY THE PAPERWORK REDUCTION ACT OF 1995, PUBLIC LAW 104-13, OCTOBER 1, 1995, 44 U.S.C. SECTION 3507.

December 15, 2016

Ms. Marlene H. Dortch Secretary Federal Communications Commission 445 12th Street, S.W. Washington, D.C. 20554

Re:

Request for Special Temporary Authority

Ellenwood, Georgia Earth Station E940532

Dear Ms. Dortch:

Intelsat License LLC ("Intelsat") herein requests thirty days, beginning January 1, 2017, of Special Temporary Authority ("STA") to use its Ellenwood, Georgia Ku-band earth station—call sign E940532—to provide telemetry, tracking, and command ("TT&C") services for Intelsat 1R (S2368) during its drift from 50.1° W.L. to 169.2° E.L. Subject to receipt of FCC approval, Intelsat 1R is expected to begin drifting January 1, 2017 and the drift will take approximately four months.<sup>2</sup>

TT&C operations will be performed in the following frequencies: 13995 MHz and 14498.5 MHz (Earth-to-space); and 11696 MHz and 11697 MHz (space-to-Earth). The drift operations will be coordinated with all operators of satellites that use the same frequency bands and are in the drift path.<sup>3</sup> All operators of satellites in that path will be provided with an emergency phone number where the licensee can be reached in the event that harmful interference occurs.

The 24x7 contact information is as follows:

Ph.: (703) 559-7701 – East Coast Operations Center (primary) (310) 525-5591 – West Coast Operations Center (back-up)

Request to speak with Harry Burnham or Kevin Bell.

In further support of this request, Intelsat incorporates by reference Exhibit A, which contains technical information that demonstrates that the operation of the earth station will be compatible with its electromagnetic environment and will not cause harmful interference into any lawfully operating terrestrial facility, or into Federal systems operating in the 13.75-14.00 GHz band. In the extremely unlikely event that harmful interference should occur due to transmissions to or from its earth station, Intelsat will take all reasonable steps to eliminate the interference.

<sup>&</sup>lt;sup>1</sup> Intelsat has filed its STA request, an FCC Form 159, a \$200.00 filing fee, and this supporting letter electronically via the International Bureau's Filing System ("IBFS").

<sup>&</sup>lt;sup>2</sup> See Intelsat License LLC, Request for Special Temporary Authority to Drift and Operate Intelsat 1R at 169.2° E.L.; Call Sign S2368, File No. SAT-STA-20161018-00099 (filed Oct. 18, 2016).

<sup>&</sup>lt;sup>3</sup> Intelsat will handle the coordination.

Ms. Marlene H. Dortch December 15, 2016 Page 2

Grant of this STA request will allow Intelsat to drift the Intelsat 1R satellite to its new location. This, in turn, will help Intelsat meet a potential service demand at 169.2° E.L. orbital location and thereby promotes the public interest.

Please direct any questions regarding this STA request to the undersigned at (703) 559-6949.

Respectfully submitted,

/s/ Cynthia J. Grady

## Intelsat Licence LLC Atlanta, Georgia

### GENERAL DYNAMICS/7.2KPK 7.2m Meter Earth Station

### 1. Background

This Exhibit is presented to demonstrate the extent to which the Intelsat License LLC ("Intelsat") satellite earth station in Atlanta, Georgia is in compliance with the Federal Communications Commision ("FCC") Report and Order 96-377. The potential inteference from the earth station to U.S. Navy shipboard radiolocation operations ("RADAR") and the National Aeronautics and Space Administration ("NASA") space research activities in the 13.75-14.0 GHz band is addressed in this exhibit. The parameters for the earth station are:

Coordinates (NAD83):

Satellite Location for Earth Station:

Frequency Band:

Polarizations:

Emissions:

Modulation:

Maximum Aggregate Uplink EIRP:

**Transmit Antenna Characteristics** 

Antenna Size:

Anenna Type/Model:

87dBW for all Carriers

7.2m Meters in Diameter

GENERAL DYNAMICS/7.2KPK

58.4 dBi

28.6 dBW or 5.3 dBW/4kHz

5.65° @ 260.22° Azimuth

5.2° @ 99.65° Azimuth

FCC Reference Pattern

Because the above uplink spectrum is shared with the Federal Government, coordination in this band requires resolution data pertaining to potential interference between the earth stations and both U.S. Navy Department and NASA systems. Potential intefference from the earth station could impact the U.S. Navy and/or NASA systems in two areas. These areas are noted in GCC Report and Order 96-377 dated September 1996, and consist of (1) Radiolocation and Radio Navigation, (2) Data Relay Satellites.

### Summary of Coordination Issues:

- a.) Potential Impact to Government Radiolocation (Shipboard Radar)
- b.) Potential Impact to NASA Tracking and Data Relay Satellite Systems ("TDRSS")

### 2. Potential Impact to Government Radiolocation (Shipboard Radar)

Radiolocation operations ("RADAR") may occur anywhere in the 13.4-14.0 GHz frequency band aboard ocean-going U.S. Navy ships. FCC order 96-377 allocates the top 250MHz of this 600 MHz band to the Fixed Satellite Service ("FSS") on a co-primary basis with the radiolocation operations and provides for an interference protection level of -167 dBW/m<sup>2</sup>/4kHz.

The closest distance to the shoreline from Atlanta, Georgia earth station is approximately 369 km. The calculation of the power spectral density at this distance is given by:

Clear Sky EIRP: 87 dBW
 Carrier Bandwidth: 850 kHz
 PD at antenna input: 5.3 dBW/4kHz
 Transmit Antenna Gain: 58.4 dBi
 Antenna Gain to Horizon: 10.2 dBi
 Antenna Elevation Angles: 5.7° @ 260.2° azimuth

The earth station will radiate interference toward the ocean according to its off-axis side-lobe performance. A conservative analysis, using FCC standard reference pattern, results in an off-axis antenna gain of 10.2 towards the nearest shoreline.

5.2° @ 99.7° azimuth

The signal density at the shoreline, through free space is:

PFD = Antenna Feed Power density (dBW/4kHz) + Antenna Off-Axis Gain (dBi) - Spread Loss (dBW/m²)

= 5.3 dBW/4kHz + 10.2 dBi - (20\*log[369km]+20\*log[13.8]+92.45)

= -106.8 dBW/m/4kHz - Additional Path Losses (87 dB)

Our calculation indicate additional path loss of approximately 87 dB including absorbtion loss and earth diffraction loss for the actual path profiles from the earth station to the nearest shoreline.

The calculated PFD, including additional path losses to the closest shoreline, is -193.8dBW/ m^2/4 kHz. This is 26.8dB below the -167.0 dBW/ m^2/4 kHz interference criteria of the R&O 96-377. Therefore, there should be no interference to the U.S. Navy RADAR from the Atlanta, Georgia earth station due to the distance and the terrain blockage between the site and the shore.

### 3. Potential Impact to NASA's Tracking and Data Relay Satellite System

The geographic location of the Intelsat earth station in Atlanta, Georgia is outside the 390 km radius coordination contour surrounding NASA's White Sands, New Mexico ground station complex. Therefore the TDRSS space-to-earth link will not be impacted by the Intelsat earth station in Atlanta, Georgia.

The TDRSS space-to-space link in the 13.772 to 13.778 GHz band is assumed to be protected if an earth station produces and EIRP of less than 71 dBW/6MHz in this band. The 7.2m meter earth station antenna will not transmit in this band. Therefore, there will be no potential interference to the TDRSS space-to-space link.

### 4. Coordination Result Summary and Conclusions

The results of the analysis and calculation performed in this exhibit indicate that compatible operation between the earth station at the Atlanta, Georgia facility and U.S. Navy and NASA TDRSS space-to-earth and space-to-space links are possible. No interference to U.S. Navy RADAR or NASA TDRSS operations from the Atlanta, Georgia site earth station should occur.
