

Exhibit B

Request for Waiver of Footnote US271 to the U.S. Table of Allocations

To the extent necessary, Intelsat requests a waiver of footnote US271 to the U.S. Table of Frequency Allocations, which limits the use of the 17.3-17.8 GHz frequency band to fixed-satellite service (Earth-to-space) feeder links for broadcasting satellite service (“BSS”).¹ Intelsat seeks waiver to permit KA258, located in Hagerstown, Maryland, to communicate with the BSAT-4A satellite during its launch and early orbit phase (“LEOP”) mission.

The Commission may grant a waiver for good cause shown.² The Commission typically grants a waiver where the particular facts make strict compliance inconsistent with the public interest.³ In granting a waiver, the Commission may take into account considerations of hardship, equity, or more effective implementation of overall policy on an individual basis.⁴ Waiver is therefore appropriate if special circumstances warrant a deviation from the general rule, and such a deviation will serve the public interest.

Good cause exists to waive, for purposes of the BSAT-4A LEOP mission, the designation of the 17.3-17.8 GHz frequency band for FSS feeder links only. The antenna will be transmitting to the satellite as it travels on its non-geosynchronous “transfer orbit” or “LEOP path,” which starts immediately following its separation from a launch vehicle, and ends when the satellite reaches its geostationary orbital location. Allowing Intelsat to provide LEOP services to BSAT-4A in this band will serve the public interest by ensuring safety of flight during orbit rising and help provide additional capacity from the 110° E.L. orbital location. Moreover, Intelsat’s operations will be on a non-protected, non-interference basis.

Grant of this waiver is consistent with the Commission’s precedent. A waiver of the Table of Allocations is generally granted “when there is little potential interference into any service authorized under the Table of Frequency allocations and when the nonconforming operator accepts any interference from authorized services.”⁵ Intelsat expects to communicate with the BSAT-4A satellite intermittently over a period of approximately 30 days using only two frequencies in the 17.3-17.8 GHz band. As such, this use poses a negligible risk of potential interference to co-frequency operations in the 17.3-17.8 GHz frequency band.

Given these particular facts, the waiver sought herein is plainly appropriate.
