

Exhibit
**PETITION FOR WAIVER OF FREQUENCY COORDINATION AND THREE-DAY-
STA PROCESSING TIME**

**I. TO THE EXTENT THEY APPLY, GOOD CAUSE EXISTS FOR A WAIVER OF
FREQUENCY COORDINATION**

Universal Space Network, Inc. (USN) has been asked to provide immediate support for the WJ2XUG Spacecraft launched on September 2, 2020. The spacecraft has an anomaly that requires correction. Through several ground interventions, the satellite spin rates have been substantially reduced, and the satellite's attitude has been brought under control. The authority sought here will increase the diversity of the earth stations conducting communications with the satellite and to accelerate the satellite's return to normal operations. The spacecraft is licensed by the OET Experimental division and has a call sign of WJ2XUG. USN does not have the required 30 days to obtain a frequency coordination for this support but will submit such if the support becomes routine. USN has successfully coordinated with the SBE for this effort, and thus thinks it is low risk of interference.

**II. GOOD CAUSE EXISTS FOR A WAIVER OF THE THREE-DAY PROCESSING
TIME**

USN further requests a waiver of the STA processing time due to the immediate requirement for anomaly resolution of the WJ2XUG spacecraft.
