Re: **Request for 60-Day Extension of STA (Clifton, TX)**
Globalstar Licensee LLC – ICFS File No. SES-STA-20260331-00413 (Call
Sign E000345)

Dear Mr. Schwarz:

Under Section 25.120 of the Commission’s rules, Globalstar Licensee LLC (together with its parent Globalstar, Inc., “Globalstar”) hereby requests a 60-day extension of its existing, above-captioned Special Temporary Authority (“STA”) so it can continue to operate one of Globalstar’s second-generation feeder link earth station antennas under call sign E000345 in Clifton, Texas.¹ Grant of this STA extension will help accelerate Globalstar’s use of its mobile satellite service (“MSS”) network for enhanced safety-of-life services while its license modification application for this antenna remains pending.²

Grant of the requested STA extension will yield significant benefits for Globalstar’s MSS network and its subscribers. Globalstar’s second-generation feeder link earth station antennas – 6-meter Cobham SATCOM dishes with radomes – are more efficient than Globalstar’s first-generation transceivers, requiring less power and only minimal maintenance. These second-generation facilities also provide superior satellite-tracking capability, relying on state-of-the-art auto-track technology.

¹ 47 C.F.R. § 25.120(a).

² On February 28, 2024, Globalstar applied for authority to modify its feeder link earth station antenna under sign E000345 in Clifton, Texas, so it can operate its second-generation earth station antenna under this call sign on a permanent basis. *See* Application of GUSA Licensee LLC, ICFS File No. SES-MOD-20240229-00652 (Feb. 28, 2024) (“February 2024 Application”). The Commission granted Globalstar’s current STA for this earth station antenna on April 9, 2026. *See Satellite Communications Services Information re: Actions Taken*, Public Notice, Report No. SES-02853 at 10 (Apr. 15, 2026).

Mr. Jay Schwarz

LermanSenter

Given the benefits of its second-generation feeder link antenna technology, Globalstar has deployed these antennas at all of its U.S. gateway locations. These antennas comply with all applicable Commission regulations. Globalstar provides the relevant technical parameters for its second-generation earth station antenna in the Technical Exhibit ("Exhibit 2") to this STA request.

Globalstar urges the Commission to expeditiously grant the instant request for a 60-day extension of the STA for call sign E000345. Such grant will enable Globalstar to operate the second-generation earth station antenna in Clifton while the February 2024 Application remains pending, and will advance the public interest by allowing Globalstar to realize significant operational benefits and develop enhanced safety-of-life services as rapidly as possible.

Please do not hesitate to contact me with any questions.
