**Re: Request for 60-Day Special Temporary Authority (Reno, NV)
GUSA Licensee LLC – FCC File Nos. SES-LIC-20201026-01179 and SES-
AMD-20201216-01393 (Call Sign E202182)**

Dear Mr. Sullivan:

GUSA Licensee LLC (together with its parent Globalstar, Inc., “Globalstar”) hereby requests a 60-day Special Temporary Authority (“STA”) under Section 25.120(a) of the Commission’s rules in order to operate one of Globalstar’s second-generation feeder link earth station antennas at its new gateway facility in Reno, NV.¹ Globalstar requests a grant of this STA request by May 14, 2021, so that it can expeditiously begin testing this second-generation antenna and accelerate the use of its mobile satellite service (“MSS”) network for enhanced safety-of-life services.

On October 26, 2020, Globalstar applied for authority to operate a second-generation feeder link earth station antenna in Reno, Nevada on a permanent basis, and Globalstar amended this application on December 16, 2020.² The Commission placed the amended October Application on public notice in January 2021, and no party opposed or commented on this

¹ 47 C.F.R. § 25.120(a).

² See Application of GUSA Licensee LLC, FCC File No. SES-LIC-20201026-01179 (Oct. 26, 2020) (“October Application”); Application for Amendment of GUSA Licensee LLC, FCC File No. SES-AMD-20201216-01393 (Dec. 16, 2020). Globalstar concurrently applied for permanent authority to operate two additional earth station antennas in Reno. See Application of GUSA Licensee LLC, FCC File No. SES-LIC-20201026-01177 (Oct. 26, 2020); Application for Amendment of GUSA Licensee LLC, FCC File No. SES-AMD-20201216-01394 (Dec. 16, 2020) (Reno-1 application and amendment); Application of GUSA Licensee LLC, FCC File No. SES-LIC-20201026-01178 (Oct. 26, 2020); Application for Amendment of GUSA Licensee LLC, FCC File No. SES-AMD-20201216-01392 (Dec. 16, 2020) (Reno-3 application and amendment).

application.³ Globalstar has now completed construction of this second-generation earth station antenna and is ready to commence operations once authorized. Globalstar continues to urge the Commission to grant the October Application as soon as possible, given the strong public interest benefits of such approval. In the meantime, grant of the requested 60-day STA by May 14, 2021 will allow Globalstar to operate the proposed second-generation earth station antenna in Nevada while the October Application for permanent authority remains pending.

Clearly, grant of the requested STA at the new Nevada gateway facility will yield significant benefits for Globalstar's MSS network and its subscribers. As explained in Globalstar's October Application, the initiation of feeder link operations at the new Nevada gateway will expand Globalstar's MSS signal coverage, improve its service quality in the western United States, and promote innovation for its safety-of-life service and other offerings.⁴ In addition, activation of this second-generation earth station antennas will improve Globalstar's satellite control and help optimize its constellation management. These second-generation earth station antennas – 6-meter Cobham SATCOM dishes with radomes – provide superior satellite-tracking capability, relying on state-of-the-art auto-track technology. These antennas are also more efficient than Globalstar's existing transceivers, requiring less power and only minimal maintenance.

Given the benefits of its second-generation feeder link antenna technology, Globalstar plans to deploy these antennas at all of its U.S. gateway locations over the next one to two years. Notably, these antennas are similar to Globalstar's current gateway systems from an RF perspective and comply with all applicable Commission regulations. Globalstar provides the relevant technical parameters for its second-generation earth station antenna in the Technical Exhibit ("Exhibit 2") to this STA request.

In addition to supporting all the carriers that are today supported by Globalstar's licensed MSS network, Globalstar's second-generation feeder link antenna will be used under the requested STA to evaluate a new waveform for use on its network. Globalstar plans to transmit this waveform on a test basis over this antenna because this approach represents the best means of assessing, validating, and finalizing the parameters for this carrier. Such testing is necessary to ensure that this carrier will meet the specific requirements of its safety-of-life service offerings.

Globalstar provides the relevant technical parameters for its transmissions of this new waveform in the Technical Exhibit to this application ("Exhibit 2"). As described in Exhibit 2 (and as Globalstar has previously described), this waveform is a burst mode packet data carrier that supports short-messaging data services. The maximum channel bandwidth for this waveform is 4.5 megahertz at 5096-5250 MHz and 200 kilohertz at 6900-7055 MHz.

³ *Satellite Communications Services re: Satellite Radio Applications Accepted for Filing*, Public Notice, Report No. SES-02334 at 2-4 (rel. Jan. 13, 2021).

⁴ October Application, Public Interest Statement at 1.

Mr. Tom Sullivan

May 6, 2021

Page 3

As indicated above, grant of the requested 60-day STA by May 14, 2021 will enable Globalstar to operate the proposed earth station antenna in Nevada while the October Application for permanent authority remains pending. Such temporary authority will advance the public interest by enabling Globalstar to improve its MSS coverage in the western United States, test its new waveform, and expedite the roll-out of its enhanced safety-of-life services.

Please do not hesitate to contact me with any questions.

Respectfully submitted,

/s/ Stephen J. Berman
