

Exhibit F: Response to FCC Form 312, Question A21

The instant application seeks FCC authority for the transfer of control of U.S. Satellite Corporation (“USSC”), licensee of VSAT earth stations E900470 and E900471, from SUPERVALU Inc. (“SUPERVALU”) to AB Acquisition LLC (“AB Acquisition”). The instant application is part of a larger transaction involving AB Acquisition’s acquisition of certain retail food and drug businesses from SUPERVALU. Therefore, USSC is simultaneously (in two additional applications) requesting transfer of control of its earth station licenses with call signs E2595, E030277, and E870499; and its private microwave wireless licenses with call signs WQRK224, WQRK225, and WQRK226. The FCC previously approved the transfer of certain private business radio licenses from SUPERVALU to AB Acquisition as part of this transaction.¹

Grant of this application is in the public interest. USSC provides uplink and downlink satellite services for the retail food and drug businesses acquired by AB Acquisition as part of this transaction, as well as systems integration and IP network services. In addition, USSC provides its services on a non-common carrier basis to unrelated parties. Grant of the instant application will allow the continued provision of these services to USSC’s customers and facilitate the larger transaction.
