

RE: Syniverse Technologies, Inc.  
Request for Additional International Signaling Point Code (ISPC)

To whom it may concern:

Syniverse Technologies, Inc. (Syniverse) respectfully requests an additional international signaling point code for use on our signaling network. The need for the new ISPC by Syniverse is driven by the following:

- Function of new point code: capability point code [CPC] for TCAP services.
- Location of equipment: Wentzville, MO with redundant facilities located in Dallas TX (CPC is built in both instances)
- Type of SS7 equipment: SCP [application server]
- Type of service: GSM Value-Added Service
- Networks other than Syniverse will use the international SS7 domain to signal to the new CPC, necessitating its unique network appearance, to obtain proper signaling network management [SNM] function for the new point code in the international domain.

Please do not hesitate to contact me with any questions or if you require any additional information.

Sincerely,

Dave Robinson  
Syniverse Technologies, Inc.
