

Within the assignment guidelines, and consistent with ITU\_T Recommendation Q.708, Syniverse requests the assignment of three (3) International Signaling Point Codes. Syniverse requires one International Signaling Point Codes to support SS7 Transaction (TCAP) messages for international carriers. Syniverse supports the transfer of mobile subscriber information from one cellular network to another.

The location of the SCP is Dallas, TX, paired with SCP located in Wentzville, MO. The type of SS7 equipment will be an SCP [application server] and the service deployed is associated with GSM Value-Added Service

International carrier networks will use the international SS7 domain to signal to the new CPC, necessitating its unique network appearance, to obtain proper signaling network management [SNM] function for the new point code in the international domain.

If you have any questions regarding this request, please do not hesitate to contact me.

Sincerely,

David Robinson  
Syniverse Technologies, Inc.
